

In the Name of God

Section I

Title: Pharmacy

Degree: MPharm/PharmD

Introduction

The School of Pharmacy at the International Campus of the Tehran University of Medical Sciences is an outstanding academic centre. Students study basic sciences for 2 years and then continue specialised pharmacy courses. Students have the choice of either MPharm or PharmD degree. Pharmacy MPharm degree lasts 4-4.5 years while a PharmD degree lasts approximately 5.5 years. Successful students achieve a PharmD (Pharmacy Doctor) degree at the end of their studies. An academic year consists of two-semester with a two-week break between the semesters.

Definition

This course is designed so that its graduates will work with patients and other health care providers to screen for, prevent, and resolve medication-related problems, as well as providing health promotion, disease prevention and disease- management services.

The Aim of the Course

- To prepare pharmacy graduates with the attitudes, knowledge, skills, and abilities to become highly qualified pharmacists.
- To promote pharmaceutical research and knowledge generation through the acquisition of extramural funding and published research data.
- To produce pharmaceutical scientists, who through teaching, research and services, contribute to the body of pharmaceutical knowledge.

General Competencies

Candidates require a valid high school diploma

The Terms and Conditions of Admission to the Course

All applicants must apply electronically on our website www.gsia.ac.ir. After an application is submitted, the applicant will receive a confirmation e-mail and an application code from the Office of Admissions indicating successful submissions of the application.

The completed application form is reviewed in the preliminary review council (PRC)

Once the initial preliminary review council (PRC) has made a decision, the application will be sent to the School and the related department, for an Admission Review.

Selection Criteria for Undergraduate Applicants

. Academic grade point average (GPA): Minimum 300/400

- . Proficiency in English; Acceptable TOEFL or IELTS score (IELTS of 5.5 or equivalent is required upon graduation <http://gsia.tums.ac.ir/page-2305.htm>)
- . Evidence of intellectual or creative achievement or substantial public service
- . Special talents, achievements, and awards in particular fields
- . Experiences that demonstrate promise for leadership
- . Academic accomplishment in light of the applicant's life experiences and special circumstances
- . Please also include an English translation for all documents.

NOTE: In addition to meeting the selection criteria outlined above, applicants might be asked to participated in an interview

Educational Strategies, Methods and Techniques

The school's curriculum provides students with the opportunity to develop their skills both in theory and practice. The curriculum provides graduates with the opportunity to work in industrial and pharmaceutical companies, quality control laboratories, poison control centers, cosmetic companies, cellular pharmacology, herbal medicine, biotechnology research, and academia.

Student Assessment

Written exams as well as practical course work in the labs

Ethical issues

The graduates should,

- Observe the Patient's Bill of Rights¹ when working with the patients.
- Strictly observe Biosafety and Patient Safety Rules* concerning the patients, personnel and workplace.
- Observe the Rulebook for Dress Code².
- Strictly observe the Regulations of Working with the Laboratory Animals³.
- Carefully preserve resources and equipment.
- Truly respect faculty members, the staff, classmates and other students and work for creating an intimate and respectful atmosphere.
- Observe social and professional ethical considerations in criticism.

1, 2 and 3 are contained in the Enclosures.

* Biosafety and Patient Safety Rules will be set out by the Educational Departments and will be available to the students.

Number and Type of Credits and Tables of the Courses

Tehran University of Medical Sciences- International Campus					
Pharmacy curriculum for the <u>MPharm/PharmD</u> degree offered as half-year semesters.					
Pharmacy- 1 st semester					
	Subject	Number of credits			Total credits
		Credit (theory)	Credit (practical)	prerequisite	
1	General Chemistry	3			3
2	General Chemistry (Lab.)		1		1
3	Medical Terminology	2			2
4	First Aid	1	1		2
5	Anatomy & Histology	2			2
6	Anatomy& Histology (Lab.)		1		1
7	General Biology	2			2
8	Pharmaceutics (Introduction)	2			2
9	Maths for Pharmacist	2			2
10	Persian Language I	2			2
	Total	16	3		19
Pharmacy- 2 nd semester					
	Subject	Number of credits			Total credits
		Credit (theory)	Credit (practical)	prerequisite	
1	Organic Chemistry I	3			3
2	Biochemistry	3			3
3	Biochemistry (Lab.)		1		1
4	Medical Microbiology I	3		General Biology	3
5	Medical Microbiology I (Lab.)		1		1
6	Physical Pharmacy I	2			2
7	Physiology I	4		Anatomy & Histology	4
8	Persian Language II	2			2

	Total	17	2		19
--	-------	----	---	--	----

Pharmacy- 3 rd semester					
	Subject	Number of credits			Total credits
		Credit (theory)	Credit (practical)	prerequisite	
1	Analytical Chemistry	2			2
2	Analytical Chemistry (Lab.)		2		2
3	Physiology II	4		Physiology I	4
4	Physiology II (Lab.)		1	Physiology I	1
5	Medical Microbiology II	2		Medical Microbiology I	2
6	Medical Microbiology II (Lab.)		1	Medical Microbiology I	1
7	Physical Pharmacy II	2		Physical Pharmacy I	2
8	Organic Chemistry II	3		Organic Chemistry I	3
	Organic Chemistry II (Lab.)		1	Organic Chemistry I	1
9	Epidemiology	2			2
	Total	15	5		20

Pharmacy- 4 th semester					
	Subject	Number of credits			Total credits
		Credit (theory)	Credit (practical)	prerequisite	
1	Immunology	3			3
2	Immunology (Lab.)		1		1
3	Clinical Biochemistry	2		Biochemistry	2
4	Pharmacology I	3		Physiology, Biochemistry	3
5	Medical Devices	1			1
6	Biostatistics	2	1		3
7	Medicinal Chemistry I	3		General Chemistry, Organic Chemistry, Pharmacology I	3
8	Nutraceuticals & Nutrition Care	2		Biochemistry, Analytical Chemistry	2
	Total	16	2		18

Pharmacy- 5 th semester					
	Subject	Number of credits			Total credits
		Credit (theory)	Credit (practical)	prerequisite	
1	Pharmaceutics (Solid Dosage Forms)	3	1	Pharmaceutics (Introduction)	4

2	Pharmacology II	3	1	Pharmacology I	4
3	Sociology	2			2
4	Medicinal Plants	2	1		3
5	Medicinal Chemistry II	3		Medicinal Chemistry I, Pharmacology II	3
6	Biological Products	2		Immunology	2
7	Ethics in Pharmacy	1			1
	Total	16	3		19

Pharmacy- 6 th semester					
	Subject	Number of credits			Total credits
		Credit (theory)	Credit (practical)	prerequisite	
1	Pharmaceutics (Liquid Dosage Forms)	3	1	Pharmaceutics (Solid Dosage Forms)	4
2	Pharmacology III	3		Pharmacology II	3
3	Pharmacognosy I	2		Medicinal Plants	2
4	Medicinal Chemistry III	3		Medicinal Chemistry II, Pharmacology III	3
5	Medicinal Chemistry (Lab.)		1		1
6	Pharmacotherapy I	3		Pharmacology III	3
7	Psychology	2			2
8	Community Pharmacy Training I		2	Pharmacology III	2
	Total	16	4		20

Pharmacy- 7 th semester					
	Subject	Number of credits			Total credits
		Credit (theory)	Credit (practical)	prerequisite	
1	Pharmaceutics (Semi-Solids & Inhalers)	2	1	Pharmaceutics (Introduction)	3
2	Pharmacotherapy II	3		Pharmacotherapy I	3
3	Pharmacognosy II	3		Pharmacognosy I	3
4	Pharmacognosy (Lab.)		2	Pharmacognosy I	2
5	Pharmaceutical Policy & Pharmaco-economics	2			2
6	Biopharmacy & Pharmacokinetics	3		Maths for Pharmacist, Pharmacology III	3
7	Community Pharmacy Training II		2		2
8	Thesis I		2	After 90 Credits	2
	Total	13	7		20

Pharmacy- 8 th semester					
	Subject	Number of credits			Total credits
		Credit (theory)	Credit (practical)	prerequisite	
1	Instrumental Analytical Methods	3	1	Organic Chemistry, Analytical Chemistry	4

2	Hygiene & Cosmetic Products	2		Pharmaceutics (Semi-Solids & Inhalers)	2
3	Pharmacotherapy III	3		Pharmacotherapy II	3
4	Radiopharmaceuticals	2			2
5	Industrial Training		2	Pharmaceutics (Semi-Solids & Inhalers)	2
6	Hospital Pharmacy Training		2	Pharmacotherapy III	2
7	Toxicology	2	1	Pharmacology III	3
8	Thesis II		2	Thesis I	2
	Total	12	8		20

MPharm students will graduate at this stage upon successful completion of all modules.

Pharmacy- 9th semester					
	Subject	Number of credits			Total credits
		Credit (theory)	Credit (practical)	prerequisite	
1	Microbial Control	2	1	Medical Microbiology II, Pharmaceutics (Introduction)	3
2	Pharmaceutical Biotechnology	3		General Biology	3
3	Instrumental Analytical Methods (advanced)	2	1	Instrumental Analytical Methods	3
4	Drug Poisoning Management	2		Toxicology, Pharmacology III, First Aids	2
5	Elective course	2		Relevant to the Thesis	2
6	Advanced Medicinal Chemistry	2		Medicinal Chemistry III	2
7	Pharmaceutics (Novel Drug Delivery Systems)	2	1	Pharmaceutics (Semi-Solids & Inhalers)	3
8	Thesis III		2		2
	Total	15	5		20

Pharmacy- 10th semester					
	Subject	Number of credits			Total credits
		Credit (theory)	Credit (practical)	prerequisite	
1	Physico-chemical Control	2	1	General Chemistry, Analytical Chemistry, Instrumental Analytical Methods	3
2	Community Pharmacy Internship		6	Community Pharmacy Training II , Pharmacotherapy III	6
3	Clinical Internship		6*	Community Pharmacy Training II , Pharmacotherapy III	6*
4	Industrial Internship		6*	Industrial Training	6*
5	Elective course	2			2
5	Thesis IV		2	Thesis III	2
	Total	4	15*		19*

*** Students may choose either Clinical or Industrial Internship.**

Pharmacy- Elective courses

Subject	Credit	Subject	Credit
Instrumental analytical methods (Advanced)	2	Nutritional materials (Chemistry and control)	2
Hospital Pharmacy	2	Biopharmacy (lab.)	1
Clinical pharmacy	2	Plant cell culture	2
Phytochemistry	2	Animal cell culture	2
Traditional and alternative medicine	2	Drug/poisoning information services	2

Section II

COURSE NAME: Mathematics for Pharmacist

NUMBER OF CREDITS: 2

COURSE TYPE: Theoretical

PREREQUISITES: -

GENERAL AIMS

- Basic knowledge of mathematics
- Knowledge of mathematical rules and relations
- Enabling students to analyze economic, administrative and accounting issues

COURSE DESCRIPTION

A broad knowledge of mathematical sciences is central to proper use of different approaches in pharmaceutical processes and the effect of the resultant drugs; therefore in this course students are taught to use mathematical equations and theories directly related to these processes.

LEARNING OUTCOMES

Students must:

- have basic knowledge of functions
- know all types of functions
- know the definitions and properties of limit
- be able to use differential calculus
- know the functions of differential calculus
- know integral calculus

CONTENT

- Group theory: principles and main manipulations of member groups
- Functional relations: relations of all functions
- Limit, definition and characteristics
- Primary function and integral calculus

SOURCES

Differential and integral calculus and analytical Geometry

ASSESSMENT METHOD:

1. Essay type test: 70%
2. Team work results: 30%

COURSE NAME: General Chemistry

NUMBER OF CREDITS: 3

COURSE TYPE: Theoretical

PREREQUISITES: -

GENERAL AIMS

- Familiarizing students with chemical laws and calculations
- Familiarizing students with atom structure and chemical bonding
- Familiarizing students with chemical equilibrium and kinetic equations and thermodynamics

COURSE DESCRIPTION

The principles of matter properties including liquid, solid and gas phases and metals and the general laws of these matter phases are taught in this course, and this knowledge is used as a basic science in pharmaceutical sciences.

LEARNING OUTCOMES

Students must:

- Know and be able to explain chemical concepts and calculations
- Be able to use these concepts in understanding chemical phenomena
- Be able to solve and analyze theoretical and practical problems in chemistry
- Know the different chemical and inter-molecular bonds
- Know the laws of gases, liquids and solutions
- Know chemical equilibrium and chemical kinetics
-

CONTENT

1. Electronic structure of atoms
2. Chemical bonds and molecular orbitals
3. Complexes
4. Gasses
5. Liquids
6. Solids
7. Solutions and the related rules
8. Chemical equilibrium
9. Chemical kinetics
10. Acids and bases, and salts
11. Solubility product
12. Thermodynamics
13. Electrochemistry

SOURCES

1. Mortimer, C.E. Chemistry, Last edition.
2. Atkins, P.W. General Chemistry, Last edition

ASSESSMENT METHOD

- Essay type exam 30%

- Multiple choice exam 50%
- Class work 10%
- Oral presentation 10%

COURSE NAME: General Chemistry

NUMBER OF CREDITS: 1

COURSE TYPE: Practical

PREREQUISITES: -

GENERAL AIMS

Acquiring the required skills to use lab equipment and recognizing materials through their physical characteristics

Separation and identification of cations and anions and performing some oxidation and reduction reactions

COURSE DESCRIPTION

Learning different laboratory techniques, determine the chemical characteristics of materials, performing oxidation and reduction reactions and analysis of cations and anions are covered in this course.

LEARNING OUTCOMES

Students must:

- Know the equipments in general chemistry lab
- Be able to identify materials using analytical reactions
- Know cations and anions classifications and identification methods
- Know different oxidation and reduction methods

CONTENT

1. Knowing lab equipments
2. Acid-base titration
3. Filtration and precipitate formation
4. Preparation of barium sulfate
5. Preparation of sodium hypochlorite
6. Preparation of hydrogen peroxide
7. Preparation of boric acid
8. Identification of cations (group I)
9. Identification of cations (group II)
10. Identification of cations (group III)
11. Identification of cations (group IV)
12. Identification of cations (group V)
13. Identification of anions
14. Effect of concentration on chemical rate

SOURCES

- 2- James M. Postma, Julian L. Roberts, J. Leland Hollenberg. Chemistry in the Laboratory. (7th Edition) W. H. Freeman and Company, New York, 2010.

- 3- J. H. Nelson, Kenneth C. Kemp. Laboratory Experiments for Brown and Lemay. (4th Edition)
Prentice Hall, Englewood Cliffs, New Jersey, USA, 1988.

ASSESSMENT METHOD

- Lab activity and result report 60%
- Essay type exam 40%

COURSE NAME: General Biology

NUMBER OF CREDITS: 2

COURSE TYPE: Theoretical

PREREQUISITES: -

GENERAL AIMS

Familiarizing students with:

- The concepts and functions of cell structure and physiology in molecular biology (learning about primary and advanced cells)
- The principles of Genetics
- Molecular immunology
- Basic principles of DNA technology

COURSE DESCRIPTION

Because of the progress made in pharmaceutical sciences at molecular level and the central role of Genetics in drug preparation, this course provides students with the required knowledge.

LEARNING OUTCOMES

Students must:

1. know the functions of different metabolic cycles in cells
2. know the functions of different cell organelles in Genetics
3. know cell structure
4. know concepts of cell mutation
5. know how to control cell activity

CONTENT

- History of molecular biology and genetics.
- The significance of genetics.
- A review of Nucleic acids and gene structure
- Review of DNA amplification
- Review of DNA replication
- Transcription process in protein synthesis
- Methods of gene activity control
- Molecular immunology and antibody genetic basics.
- Types and structure of antibodies.
- Types of mutation(methods of mutation creation)
- Knowing teratogens, carcinogens, mutagens.
- Molecular basics of cancers
 - a. Different stages of cancers
 - b. Genetic aspects of cancers
 - c. Cancer mechanism- genetics

SOURCES

- Walker, J.M. and Gingold, E.B, Molecular Biology and biotechnology. Royal society of Chemistry, London (1993)

ASSESSMENT METHOD:

- Multiple choice exam 30%
- Essay type exam 40%
- Translation of articles and books
- Team work results

COURSE NAME: Anatomy and Histology

NUMBER OF CREDITS: 2

COURSE TYPE: Theoretical

PREREQUISITES: -

GENERAL AIMS

- Familiarizing students with basic principles and concepts of general anatomy and nerve anatomy
- Familiarizing students with different body cells and epithelial and connective tissues

COURSE DESCRIPTION

Knowing the different body parts and tissues affect the way we understand the effect of drugs, and therefore it is taught in this course.

LEARNING OUTCOMES

Students must:

1. Know human anatomy
2. Know and be able to interpret the functions of the nervous system
3. Know different human tissues from cellular and microscopic aspects

CONTENT

1. General anatomy and histology and intro
2. Bone and joint anatomy
3. Muscle anatomy
4. Anatomy of the respiratory and the cardiovascular systems
5. Anatomy of the urogenital system
6. Anatomy of the spinal cord and the peripheral nerves
7. Anatomy of midbrain
8. Definition of the cell and cell components
9. Epithelial tissues, connections and functions
10. Connective tissues
11. Histology of
 - Peripheral nerve systems
 - Central nerve system
 - Blood circulatory system
 - The immune system
 - Lymphatic glands
 - The gastrointestinal tract
 - The respiratory system
 - The urinary system
 - The eye
 - The ear

SOURCES

Gray's anatomy, last edition

Histology basics, Dr. Noori and Dr. Minaei

ASSESSMENT METHOD:

Multiple choice and essay type test

COURSE NAME: Anatomy and Histology

NUMBER OF CREDITS: 1

COURSE TYPE: Practical

PREREQUISITES: -

GENERAL AIMS

- Familiarizing students with basic principles and concepts of general anatomy and nerve anatomy
- Familiarizing students with different body cells and epithelial and connective tissues

COURSE DESCRIPTION

Using the theoretical learnings, familiarization with cadaver anatomy and different body tissues using microscope and slides are of the topics covered in this course.

LEARNING OUTCOMES

Students must:

- Know human body structure
- Be able to analyze system functions, particularly the nervous system
- Know different body functions from cellular and microscopic aspects

CONTENT

1. Knowing the Museum of Anatomy
2. Knowing the osteology museum
3. Knowing the anatomy hall
4. Knowing body parts through anatomy and slides
5. Knowing different body tissues including
 - peripheral nerves
 - Central nerves
 - The circulatory system
 - The immune system
 - Lymphatic glands
 - The gastrointestinal tract
 - The respiratory system
 - The urinary system
 - The eye

SOURCES

Gray's Anatomy, last edition, or Dr. Bahram Elahi Anatomy

General Concepts in Histology, Dr. Noori and Dr. Minaei

ASSESSMENT METHOD

Recognizing body parts and lams related to different tissue types 90%

Work report 10%

COURSE NAME: Analytical Chemistry

NUMBER OF CREDITS: 2

COURSE TYPE: Theoretical

PREREQUISITES: General Chemistry

GENERAL AIMS

Familiarizing students with the principles of quantification of chemical compounds in mixtures, using chemical methods

COURSE DESCRIPTION

Analytical quantification of materials are among important topics in pharmacy, which are covered in this course.

LEARNING OUTCOMES

Students must:

- Know different methods to quantify chemicals
- Know how to quantify organic compounds using different methods
- Know different methods of titration

CONTENT

1. Introduction, definition
2. Errors and statistical processing of data
3. Acid-Base equilibrium and titrations
 - Titration curves
 - Acid-base indicators
 - Titration in non-aqueous solvents
 - Application of acid-base titrations (determination of nitrogen, Kjeldahl methods, determination of alcohols and esters)
4. Precipitation titration (Argentometric titrations)
 - Titration curves
 - End-point detection
 - Mohr titration
 - Volhard titration
 - Fajans titration
5. Complexes in analytical chemistry (Complexometric titrations)
 - EDTA titration curves
 - The function of metallochromic indicators
 - Application of complexometric EDTA titrations
6. Redox equilibria and titrations
 - General consideration of redox titrations
 - Redox titration curves
 - Redox indicators

- Application of redox titrations (permanganometry, dichromatometry, titrations involving iodine)
- 7. Gravimetric analysis

SOURCES

Quantitative Analysis, A.L.Underwood R.A.Day

Quantitative Chemical Analysis Daniel C. Harris

Fundamentals of Analytical Chemistry, S. West

ASSESSMENT METHOD

1. Group work 30%
2. Final exam (essay type and problem solving) 70%

COURSE NAME: Analytical Chemistry

NUMBER OF CREDITS: 2

COURSE TYPE: Practical

PREREQUISITES: General Chemistry

GENERAL AIMS

Performing experiments and learning the common chemical methods to identify and quantify different compounds.

COURSE DESCRIPTION

Presenting quantitative methods to measure compounds and accurate approaches to prepare solutions.

LEARNING OUTCOMES

Students must:

1. Different methods to standardize solutions
2. Different methods of titration and compound quantification.

CONTENT

1. Distribution of lab equipment among students and assigning work area, general advice on correct work methods, quantification and preparation of sodium hydroxide solution 0.1 and 0.1 M hydrochloric acid solutions.
2. Preparing standard solutions of acid and base
3. Analysis of salicylic acid and methyl salicylate (direct and back titration)
4. Analysis of aspirin (direct and back titration)
5. Analysis of a mixture of carbonate and bicarbonate
6. Analysis of a mixture of potassium hydroxide and carbonate
7. Analysis of sodium chloride (Mohr titration)
8. Analysis of potassium bromide (Volhard titration)
9. EDTA titration of zinc and calcium
10. EDTA titration of a mixture of calcium and magnesium
11. Preparation and standardization of permanganate solution and analysis of ferrous sulfate
12. Iodometric titration of copper

SOURCES

Fundamentals of Analytical Chemistry, S. West

Quantitative Chemical Analysis, D. C. Harris, 7th Edition

ASSESSMENT METHOD

Midterm exam, final exam

1. Experiments and presenting results: 80%
2. Final exam: 20%

COURSE NAME: Organic Chemistry I

NUMBER OF CREDITS: 3

COURSE TYPE: Theoretical

PREREQUISITES: General Chemistry

GENERAL AIMS

1. Familiarizing students with the Characterizations of Organic materials classifications, naming and synthesis reactions and the reaction of each organic matter group.
2. Utilizing the aforementioned concepts to learn the principles of pharmaceutical sciences and organic materials analysis to be used in biochemistry, pharmacology and medicinal chemistry, formulations of pharmaceuticals and qualifications and quantifications of them.

COURSE DESCRIPTION

In this course classifications, naming systems and the physicochemical characteristics of different organic functional groups and their synthesis routes are taught.

LEARNING OUTCOMES

Students must

1. Be able to classify and name organic materials and know the physical and chemical characterizations of each group.
2. Be able to explain synthesis processes of each of the organic material group and the related reaction mechanisms.
3. Use the learned concepts to better understand the mechanisms of drug effects (in pharmacology and medicinal chemistry) and to prepare drug formulations and quantifications and qualifications of them

CONTENT

- Alkanes: classification, nomenclature, conformations, organic metal compounds, radical halogenation reactions, radical stability.
- Stereochemistry(1): The concept of chirality, optical isomers, geometric isomers, diastereomers, enantiomers, reactions, chiral compound reactions...
- Stereochemistry(2): Stereo selective and stereospecific reactions, stereochemistry and alkene addition reactions, E₂ reactions, Cis and Anti reduction...
- Alkyl Halides: Substitution reactions (S_N1 and S_N2), carbocation types and their relative stability
- Alcohols: Alcohol preparations, reactions of alcohols with hydrogen halides, alcohol oxidations...
- Ethers: Synthesis of ethers

- Role of solvents: Classifications of solvents based on protons and polarity, suitable solvent for SN_1 and SN_2 reactions, role of the medium in the type of substitution and reduction reaction ...
- Alkenes (1):
E-Z isomerism, elimination reactions of alkyl halides and their mechanisms ...
- Alkenes(2):
Alkene reactions, hydrogenation, electrophilic additions, oxymercuration reactions, demercuration and hydroboration, radical oxidation and reductions...
- Resonance and coupling: Resonance theory and its use to justify radical and allylic carbocation stability, their reactivity in substitution and radical reactions...
- diene compounds: properties and reactions ...
- Alkynes: Alkyne preparation, electrophilic addition and reduction reactions...
- Aliphatic compounds: Reaction preparation, cyclohexane conformations, axial equatorial bonds, stereo isomers....

2. Bacon, J.D.; Caserio, M.C.; Basic Principles of Organic Chemistry; 2nded.; W.A. Benjamin, Inc.; last edition.
3. Ege, S.N.; Organic Chemistry; 2nded.; D.C Health and Company; last edition.
4. Wade, L.G.; Organic chemistry 2nd ed.; prentice-Hall, Inc.;last edition.

ASSESSMENT METHOD

1. Essay type test: 50%
2. Oral presentation: 10%
3. Evaluation test: 40%

COURSE NAME: Organic Chemistry

NUMBER OF CREDITS: 1

COURSE TYPE: Practical

PREREQUISITES: General Chemistry

GENERAL AIMS

Familiarizing students with different methods to extract and purify compounds.

COURSE DESCRIPTION

Different methods of purification and extraction are covered in this course.

LEARNING OUTCOMES

Student must:

- 1- Know purification methods
- 2- Know extraction methods

CONTENT

- Determining physical constants including melting points, boiling points, density and fracture index.
- Separation and purification of organic compounds.
- Simple distillation
- Vacuum distillation
- Distillation with water vapor
- Re-crystallization
- Extraction using organic solvents
- chromatography

SOURCES

1. Morrison, R.T. Boyd, R.N, Organic Chemistry 5th ed.; Allyn and Bacon, Inc.; 1987
2. Bacon, J.D.; Caserio, M.C.; Basic Principles of Organic Chemistry; 2nded.;W.A. Benjamin, Inc.; 1977.
3. Ege, S.N.; Organic Chemistry; 2nded.; D.C Health and Company; 1989
4. Wade, L.G.; Organic chemistry 2nd ed.; prentice-Hall, Inc.;1991

ASSESSMENT METHOD

1. Essay type test: 50%
2. Multiple choice test: 40%
3. Oral presentation: 10%

COURSE NAME: Organic Chemistry II

NUMBER OF CREDITS: 3

COURSE TYPE: Theoretical

PREREQUISITES: Organic Chemistry I

GENERAL AIMS:

4. Familiarizing students with the Ccharacterizations of organic materials
Classifications, nomenclature, synthesis reactions and the reaction of each organic matter group.
5. Utilizing the aforementioned concepts to learn the principles of pharmaceutical sciences and organic materials analysis to be used in pharmacology medicinal chemistry, formulations of pharmaceuticals and qualifications and quantifications of them.

COURSE DESCRIPTION

Methods of classifications and naming different compounds such as aliphatic and aromatic compounds and carboxylic acids are covered in this course.

LEARNING OUTCOMES:

Students must

6. Be able to classify and name organic materials and know the physical and chemical characterizations of each group.
7. Be able to explain synthesis processes of each of the organic material group and the related reaction mechanisms.
8. Use the learned concepts to better understand the mechanisms of drug effects (in pharmacology and medicinal chemistry) and to prepare drug formulations and quantifications and qualifications of them

CONTENT

- Aromaticity: Aromaticity concepts, Huckle's Rule, aromatic and anti-aromatic compounds, aromatic multinuclear hydrocarbons...
- Aromatic electrophilic substitution: The effect of substitution groups in reactivity, nitration and sulfonation mechanisms, Friedel-Crafts alkylation, halogenation mechanism...
- Aromatic aliphatic compounds: Reaction preparation, the effect of the aromatic ring on reactions, benzyl radical stability, 3-phenylmethyl as a stable free radical, benzyl cation stability ...
- Aldehydes and Ketones: Preparation of nucleophilic adding reactions of the carbonyl group...
- Carboxylic acids: Preparation methods, the effect of substitution on acid strength, alpha halogenation...

- Carboxylic acid derivatives: Nucleophilic Acyl substitution, preparation of reactions of acyl chlorides, Esters, Amides ...
- Functional derivatives of carboxylic acids: Esters, amides, nucleophilic acyl substitution, acyl chloride reactions...
- Amines: Nitrogen stereochemistry, reduction of nitro compounds, reductive amination, Hoffman rearrangement
- Amines: The effect of substitution on amine basic power, Hoffman reduction...

SOURCES

1. Morrison, R.T. Boyd, R.N, Organic Chemistry 5th ed.; Allyn and Bacon, Inc.; last edition.
2. Bacon, J.D.; Caserio, M.C.; Basic Principles of Organic Chemistry; 2nded.;W.A. Benjamin, Inc.; last edition.
3. Ege, S.N.; Organic Chemistry; 2nded.; D.C Health and Company; last edition.
4. Wade, L.G.; Organic chemistry 2nd ed.; prentice-Hall, Inc.; last edition

ASSESSMENT METHOD

- 1- Essay type test 90%
- 2- Oral presentation 10%

COURSE NAME: Biochemistry

NUMBER OF CREDITS: 3

COURSE TYPE: Theoretical

PREREQUISITES: -

GENERAL AIMS

Familiarizing students with:

- 1- Raw materials building micro molecular structures
- 2- Different biochemical mechanisms
- 3- Biochemical catalysts and vitamins and their functions in biochemical processes
- 4- Regulating factors of biochemical reactions and the central role of hormones

COURSE DESCRIPTION

The chemical structure of organic matters existing in human body, including carbohydrates, proteins, lipids and other compounds with significant functions in body, such as hormones, vitamins and enzymes will be examined in this course.

LEARNING OUTCOMES

Students must:

1. Know the structure of carbohydrates , lipids, nucleic acids and fats
2. Know the metabolisms of carbohydrates, lipids, fats and proteins
3. Know proteins, and nucleic acids biosynthesis paths
4. Know the structures and characterizations of vitamins and hormones
5. Know the catalyzing function of enzymes

CONTENT

1. Intro to biochemistry
2. Cell structure and the function of its organelles in biochemical processes
3. The chemical structure of organic compounds existing in human body, including:
 - a. Water and biological buffers
 - b. carbohydrates
 - c. Lipids
 - d. Proteins
 - e. Enzymes and vitamins
 - f. Nucleic acids
 - g. Hormone structure
4. Biosynthesis
 - a. Nucleic acids
 - b. Proteins
5. Bioenergetics and biologic oxidation

SOURCES

1. Biochemistry; Maleknia- Shahbazian
2. Lehninger Biochemistry
3. Stryer Biochemistry

ASSESSMENT METHOD

Mid-term and final multiple choice tests 100%

COURSE NAME: Biochemistry

NUMBER OF CREDITS: 1

COURSE TYPE: Practical

PREREQUISITES: -

GENERAL AIMS

- Familiarizing students with carbohydrates, fats and protein quantifications
- Familiarizing students with different kinds of biochemical tests and factors and materials quantifications

COURSE DESCRIPTION

Methods to identify significant compounds and the use of different devices to measure important factors are the topics covered in this course.

LEARNING OUTCOMES

Students must:

1. Know the methods to quantify carbohydrates
2. Know the methods to identify and quantify proteins
3. Know how to use the required devices to measure biochemical factors

CONTENT

1. Distribution of lab equipment between work groups, explanation about the equipment and the safety measures related to lab work
2. Different solution concentration units, titration
3. Carbohydrate tests(1) : Molisch's test, Benedict
4. Carbohydrate tests(2): Barfoed's test
5. Carbohydrate chromatography; urine glucose test using Benedict's method
6. Amino acid identification(Ninhydrin test, Xantoproteic reaction, Millon, sulfur)
7. Lipid analysis, emulsion test, Salkovsky's test)
8. Urine complete test, part one
Intro to urine, creatinine tests, urinary sulfate, glucose, protein...
9. Urine complete test, part two
 - Identification of blood in urine

SOURCES

1. Biochemistry Lehninger
2. Biochemistry Devlin
3. Biochemistry Stryer

ASSESSMENT METHOD

1. Experiments and work report 60%
2. Practical test 40%

COURSE NAME: Physiology I
NUMBER OF CREDITS: 4
COURSE TYPE: Theoretical
PREREQUISITES: Anatomy & Histology

GENERAL AIMS

Familiarizing students with physiology of the cardiac muscle, blood circulation, respiration, the gastrointestinal tract and blood physiology.

LEARNING OUTCOMES

Because learning about body actions and physiology of different body parts is central to knowing the mechanisms of drug effects, students will study the respiratory and the circulatory systems and the gastrointestinal tract in this course.

COURSE DESCRIPTION

Students must:

1. Know the cell and the surrounding media
2. Know the properties of the HEART CELL, electrocardiography and the laws related to the electrical pulses of the heart.
3. Know blood circulation physiology
4. Know the anatomophysiology of the respiratory system
5. Know the actions and functions of the gastrointestinal tract

CONTENT

1. Physiology of the cell and the surrounding media
 - Hemostasis , fluid compartment, the physiology and structure of the cell membrane, transport mechanisms, comparison between cardiac a, nervous and muscle action potentials
2. Physiology of the cardiac muscle
 - Anatomico-physiology of the heart, heart mechanics(systole, diastole, cardiac cycle), cardiac sounds, the effect of ions and hormones on the heart, electrocardiography, electrocardiogram derivatives, electrocardiogram derivative axes
3. Physiology of blood circulation
 - Hemodynamics (vascular resistance, viscosity, vascular blood circulation, blood pressure...), arterial pulses, physiology of arterioles, mean arterial pressure, methods of arterial pressure measurement and ...
4. Physiology of respiration
 - Anatomico-physiology of the respiratory system, respiration mechanics, rib cage elasticity, the role of surfactant, respiratory action...
5. Physiology of the gastrointestinal tract and metabolism
6. Physiology of Arterial blood regulation
 - PH definition, Henderson Hasselbalch equation, acidose types, the effect of blood buffers, intracellular buffers, the role of the respiratory system in PH regulation

7. Physiology of blood

SOURCES

Guyton Physiology; last edition.

ASSESSMENT METHOD

1. Essay type and multiple choice test 80%
2. Oral presentation 20%

COURSE NAME: Physiology II
NUMBER OF CREDITS: 4
COURSE TYPE: Theoretical
PREREQUISITES: Physiology I

GENERAL AIMS

- Familiarizing students with the endocrine glands and the urogenital system.
- Familiarizing students with the role of the kidney in regulating body fluids.
- Familiarizing students with the nervous system

COURSE DESCRIPTION

The functions of the endocrine and exocrine glands, the kidney and the nervous system are of great importance in understanding drug effect mechanisms in these systems, therefore these topics will be covered in this course.

LEARNING OUTCOMES

Students must:

1. Know the functions of the endocrine glands.
2. Know the functions of exocrine glands.
3. Know the functions of the kidney and the body fluid regulating systems.
4. Know the nervous system and the functions of each part.

CONTENT

1. Physiology of the endocrine glands and the genital system
 - Introduction to hormones and their function mechanisms, physiology of the adenohypophysis and neurohypophysis glands, the relation between pituitary gland and the hypothalamus, physiology of the thyroid gland, physiology of the parathyroid gland and calcium metabolism, the pancreatic, physiology of the ovaries, physiology of the menstrual cycle, physiology of pregnancy and placenta, physiology of menopause.
2. Physiology of the kidney and body liquid regulation
 - Anatomico-physiology of the kidney, renal blood circulation, nephron structure, glomerular filtration and measurement, plasma clearance...
3. Physiology of the nervous system
 - a. Mid-brain physiology- balance, movement and position control physiology- thalamus physiology- learning, memory and conditional reflexes- limbic system-autonomic nervous system- brain waves- body temperature regulation- cerebrospinal liquid- eye physiology- ear physiology- brain blood.
4. Physiology in sports
5. Physiology in special conditions: infancy, old age, pregnancy

SOURCES

Guyton Physiology; last edition.

ASSESSMENT METHOD

1. Essay type and multiple choice test 80%
2. Team work and oral presentation 20%

COURSE NAME: Physiology II

NUMBER OF CREDITS: 1

COURSE TYPE: Practical

PREREQUISITES: Physiology I

GENERAL AIMS

- Achieving a better understanding of physiological concepts after lab observations
- Performing some of the most common tests such as red cell count and hematocrit
- Learning how to use equipment like otoscope to diagnose diseases.

COURSE DESCRIPTION

Performing common para-clinic tests and the effects of some compounds on different organs are covered in this course.

LEARNING OUTCOMES

Students must:

- Do some clinic and paraclinic tests
- Know environmental and chemical stimulations

CONTENT

- RBC count and introduction to microscope
- WBC count
- DIFF count
- HCT, HGB
- BT, CT, PT
- Blood pressure and heart sound examination in different physiological situations and the effects of sports on them
- EKG
- Introduction to EEG, EMG
- Introduction to otoscope and ophthalmoscope
- Renal perfusion
- Liver perfusion
- Suggested complementary topics
Examination of frog spinal reflexes

SOURCES

Guyton Physiology; last edition

ASSESSMENT METHOD

1. Teamwork 60%
2. End-of-term test performing 40%

COURSE NAME: First Aid

NUMBER OF CREDITS: 2

COURSE TYPE: 1 theoretical - 1 practical cred

PREREQUISITES: -

GENERAL AIMS

Familiarizing students with first aids principles, resuscitation approaches, hemorrhage control, poisonings and emergencies in poisonings.

COURSE DESCRIPTION

A high command of different body functions is crucial in emergencies, therefore different methods to resuscitate and cope with emergencies like burns and bleedings.

LEARNING OUTCOMES

Students must:

- Know the importance of first aids
- Know different methods of cardiac and respiratory resuscitation
- Know different methods to control hemorrhages
- Know patient transport methods
- Know different types of poisoning

CONTENT

1. The importance of first aids
2. Know different kinds of respiratory and cardiac arrest and resuscitation
3. The effects of cardiac- respiratory resuscitation
4. Wounds, bleedings and trauma caused by accidents
5. How to control hemorrhages
6. Different kinds of poisoning and symptoms
7. Different kinds of burn

SOURCES

Principles of First Aids; last edition

Britain Red Cross, Guide to First Aids

Translator: Samimizad

ASSESSMENT METHOD

1. Final exam 50%
2. Practical performance of the methods 50%

COURSE NAME: Medical Devices

NUMBER OF CREDITS: 1

COURSE TYPE: theoretical

PREREQUISITES: -

GENERAL AIMS

Familiarizing students with different medical devices used in first aid, resuscitation approaches, and other areas.

COURSE DESCRIPTION

Different devices are used in the medical care units and would be covered in this course.

LEARNING OUTCOMES

Students must:

- Know the devices used in first aids
- Know devices used in cardiac and respiratory resuscitation
- Know the use of different medical equipment

CONTENT

1. Medical equipment

SOURCES

Principles of First Aids; last edition

Britain Red Cross, Guide to First Aids

Translator: Samimizad

ASSESSMENT METHOD

3. Final exam 50%
4. Practical performance of the methods 50%

COURSE NAME: Medical Microbiology I

NUMBER OF CREDITS: 3

COURSE TYPE: Theoretical

PREREQUISITES: General Biology

GENERAL AIMS

1. Learning the principles of microbiology, including the structural and physiological properties of microorganisms and their roles in diseases and the methods to control them.
2. Classification of pathogens
3. Treatment of bacterial diseases

COURSE DESCRIPTION

The principles of microorganism classification and the mechanisms of antimicrobial drugs

LEARNING OUTCOMES

Students must:

1. Know microbial and physiological principles
2. Know the methods and problems of microorganism classification
3. Know pathogenic and epidemiological mechanisms
4. Know antiseptic effect mechanisms
5. Know control methods the mechanisms of antibiotic effects
6. know the methods to determine the effect mechanisms of antibiotics
7. Be able to explain the relationship between dosage, parasite and the drug.
8. Know protection methods while working with microorganisms
9. Know methods to work with microorganisms, microscope use and microscopic and macroscopic identification of microorganisms
10. Be able to do cell culture and perform identification experiments
11. Perform antibiogram tests and know and examine antibiotic effects

CONTENT

1. An introduction to microbiology
2. Classifications of microorganisms
3. Microorganism growth and death and the related rules
4. Microorganism metabolism
5. Microorganism genetics
6. The relations of microorganisms and host
7. Antibiotics: classifications and mechanisms
8. Streptococcus
9. Gram-positive bacilli
10. Gram-negative bacilli
11. Pseudomonas
12. vibrionaceae

13. Enterobacteriaceae
14. Gram-negative cocci
15. Mycobacterium

SOURCES

Jawetz Microbiology; last edition

ASSESSMENT METHOD

1. Essay type test 90%
2. Oral presentation 10%

COURSE NAME: Medical Microbiology I

NUMBER OF CREDITS: 1

COURSE TYPE: Practical

PREREQUISITES: -

GENERAL AIMS

Familiarizing students with the structure of microorganisms, staining, lam preparation

COURSE DESCRIPTION

Methods of identifying, culture and staining of microorganisms are covered in this course.

LEARNING OUTCOMES

Students must:

1. Know microbiology lab equipment
2. Know staining methods
3. Be able to prepare culture medium
4. Know microorganism identification methods

CONTENT

1. Knowing microbiology lab equipment and lam preparation
2. Gram stain
3. Spore stain
4. Capsule stain
5. Albert's stain
6. Staining of mast cell acid
7. Performing antibiogram
8. Identification of staphylococcus, streptococcus, pneumococcus using different tests: catalase, coagulase, mannitol salt agar, Dnase, phosphatase, pigment test, hemolysis
9. Pneumococcus: hemolysis, optochin

SOURCES

Jawetz Microbiology

ASSESSMENT METHOD

1. Multiple choice test 60%
2. Seminar 10%
3. Lab work report 30%

COURSE NAME: Medical Microbiology II

NUMBER OF CREDITS: 2

COURSE TYPE: Theoretical

PREREQUISITES: Medical Microbiology I

GENERAL AIMS

Familiarizing students with parasites and fungi classifications, their life cycles, diagnosis of fungal and parasitic diseases and different kinds of pathogenic parasites and fungi.

COURSE DESCRIPTION

Due to the variety of anti-parasitic drugs and the different drug effect mechanisms, learning different methods to classify parasites and their lifecycles are crucial to a pharmacist.

LEARNING OUTCOMES

Students must:

1. Know parasite classifications.
2. Know fungus classifications.
3. Know fungal and parasitic diseases.

CONTENT

1. protozoa
 - Human malaria parasites (*plasmodium vivax*, *plasmodium falciparum* and malaria), *toxoplasma gondii*, *sarcocystis*, *isopora hermitis* and *belli*, *amoebae*...
2. worms
 - Trematodes (*schistosoma* and other pathogenic trematodes), cestodes (*echinococcus*, *tenias*, *cyst hydatid*, *dipylidium*), nematodes (*ascaris*, hookworms...)
3. arthropods
 - Lice (*pediculus humanus* and *phthirus pubis*), *cimex*, *lectularius*, *triatoma*, *xenopsylla* *cheopis*.
4. Fungi
 - Saprophytic fungi (*Penicillium*, *aspergillus*, *mucor*, *cladosporium*, *scopulariopsis*, *streptomycesrhodotorula*), *malassezia furfur*, *carnobacterium*, *mocoro candid*s, *ecthothrix*, *endothrix*, *trichophyton*, *epidermophyton*.

SOURCES

Medical Parasitology; Dr. Brown. Last translation

Medical Parasitology; dr. wog .last edition

ASSESSMENT METHOD

1. Multiple choice test 90%
2. Oral presentation 10%

COURSE NAME: Medical Microbiology II

NUMBER OF CREDITS: 1

COURSE TYPE: Practical

PREREQUISITES: Medical Microbiology I

GENERAL AIMS

- Familiarizing students with protozoan diseases.
- Familiarizing students with techniques to separate parasites from blood and fecal sample

COURSE DESCRIPTION

Methods to identify parasites, larvae and fungi will be taught.

LEARNING OUTCOMES

Students must:

1. Be able to separate protozoa from blood and fecal and tissue samples
2. Know how to separate larvae, worm and parasite from the samples.
3. Be able to identify microscopic and macroscopic fungi samples

CONTENT

In this course lab methods to study protozoan, technique to examine blood, tissue and fecal samples, sampling and preparation of samples, staining and microscopic testing will be covered.

1. Helminthology:

Diagnostic methods to experiment parasitic worm diseases, techniques to test feces and urine samples and morphological studies.

2. Entomology:

Biology and morphological identification of arthropods and the methods to prevent them

3. Mycology

Diagnosis of fungal diseases, sampling methods, direct testing, culture and microscopic and macroscopic identification of saprophyte and pathogenic fungi

SOURCES

1. Medical Parasitology; Dr. Brown
2. Medical Parasitology; Dr. Woog

ASSESSMENT METHOD

1. Identification of microscopic larvae and parasite and worm samples 80%
2. Multiple choice test 20%

COURSE NAME: Immunology

NUMBER OF CREDITS: 3

COURSE TYPE: Theoretical

PREREQUISITES: -

GENERAL AIMS

Familiarizing students with the science of immunology and its use in understanding, preventing, diagnosis and treatment of disease.

COURSE DESCRIPTION

The functions of the immune system and body defense mechanisms, different body organs which have significant roles in the functions of the immune system and the different types of immunity in body will be covered.

LEARNING OUTCOMES

Students must:

1. Know pathogens and immunologic mechanism of diseases
2. Know resistance against diseases
3. Know lab diagnosis methods
4. Know immunologic substances used to cure diseases

CONTENT

1. Cells and lymphatic organs
2. Antigens
3. The structure of immunoglobulins
4. Antibody production and humoral immunity
5. Complement
6. Antigen and antibody reaction
7. Tissue antigens
8. Immunohematology
9. Principles of auto immunity
10. Immunosuppressors and tolerance
11. Immuno-pharmacology
12. Cancer immunity
13. Vaccination reaction
14. AIDS

SOURCES

Immunology; Dr. Vajgani

ASSESSMENT METHOD

1. Multiple choice test 90%
2. Oral presentation 10%

COURSE NAME: Immunology

NUMBER OF CREDITS: 1

COURSE TYPE: Practical

PREREQUISITES: Microbiology, Parasitology and Mycology

GENERAL AIMS

Familiarizing students with different immunologic diagnosis methods, including blood group determination, immunoelectrophoresis, HLA determination ...

COURSE DESCRIPTION

Familiarizing students with different lab equipment and diagnostic testing kits and their use

LEARNING OUTCOMES

Students must:

1. Know the chemicals used for blood typing.
2. Know precipitation methods using electrophorus.
3. Know diagnostic methods like Wright test, VDRL test and blotting.

CONTENT

1. Blood group, RH and combustion.
2. Precipitation in aqueous media and immunoelectrophoresis
3. Fagocytosis and rosette test
4. HLA
5. Antibody detection using immunofluorescence
6. Immune hemagglutination
7. Nitrous complement fixation
8. Toxoplasmosis using immunofluorescence
9. Pregnancy and CRP tests
10. VDRL and abs FTA
11. Intro to Blotting
12. Intro to LTT, LMT
13. ELISA method
14. Introduction to RIA

SOURCES

Immunology; Dr. Veigani

ASSESSMENT METHOD

1. Lab diagnostic tests and team work 80%
2. Multiple choice test 10%

COURSE NAME: Epidemiology

NUMBER OF CREDITS: 2

COURSE TYPE: Theoretical

PREREQUISITES: -

GENERAL AIMS

Familiarizing students with epidemiology principles

COURSE DESCRIPTION

Because of the important role of the pharmacist in the health care cycle, it is important to increase knowledge of different health care systems and services, and this course provides students with sufficient information on the topic.

LEARNING OUTCOMES

Students must:

1. Know the basic principles of epidemiology and health care.
2. Know the level of health care services.
3. Know the health care system compartments and understand the role of the pharmacist in the system.

CONTENT

1. Definitions of health care, public health and hygiene.
2. The scope of health care services
3. Individual and social health
4. Health indicators
5. Components of basic health care.
6. The role of the pharmacist in health care
7. Use of epidemiology in health care
8. Protection against contagious diseases
9. Environmental health
 - Water hygiene
 - Food products hygiene
 - Air pollution and effects on public health
 - Soil pollution and effects on public health
10. Professional health
11. Family and school health
12. Dental health
13. Mental health

SOURCES

Public Health; Dr. Mohammad Ali Molavei & Dr. Giti Samar

ASSESSMENT METHOD

1. Essay type and multiple choice test 80%
2. Work report and team work 20%

COURSE NAME: Psychology

NUMBER OF CREDITS: 2

COURSE TYPE: Theoretical

PREREQUISITES: -

GENERAL AIMS

- Familiarizing students with the principles of psychology
- Familiarizing students with Islamic views of human mind and soul
- Familiarizing students with learning methods, thought process and perception

COURSE DESCRIPTION

Knowing the basic principles of psychology, different sense and thought processes is central to building a more effective relationship between the pharmacist and the patient and therefore this course will increase the knowledge of the pharmacist.

LEARNING OUTCOMES

Students must:

1. Know the relationship between psychology and human mind and soul.
2. Know the principles of psychology.
3. Be able to explain different sense stages.
4. Know learning methods and thought processes.
5. Know human motivation.
6. Know psychological health.
7. Know the physiological principles of psychology.

CONTENT

1. Man from the Islamic viewpoint
2. The relationship between psychology and human mind and soul
3. The relationship between psychology and other sciences and its use in medicine
4. Physiological and psychological principles
5. Growth in Islam
6. Growth in psychology
7. Perception
8. Senses
9. Learning and thought
10. Memory and forgetting
11. Language and thought
12. Physiological principles of stimulation
13. Personality evaluation
14. Human motivation and stimulation

SOURCES

1. Psychology of Learning; Dr. Seyf
2. Principles of General Psychology; Dr. Azimi

ASSESSMENT METHOD

1. Multiple choice test 40%
2. Essay type test 40%
3. Team work results 20%

COURSE NAME: Sociology

NUMBER OF CREDITS: 2

COURSE TYPE: Theoretical

PREREQUISITES: -

GENERAL AIMS

The main objective of this course is to familiarize students with culture and its use indifferent communities, particularly those existing in Iran. Society, social structures and sociocultural phenomena, formation and processes of these phenomena are other topics covered in this course.

COURSE DESCRIPTION

Because people from different ethnic groups and with different languages may seek the help of the pharmacist, a better understanding of these cultural varieties enables the pharmacist to help these patients more thoroughly and therefore this course discusses different communities, sociological theories and social patterns.

LEARNING OUTCOMES

Students must:

1. Know common expressions in sociology and anthropology.
2. Know the theories of sociology and anthropology.
3. Know different areas of sociocultural studies.

CONTENT

1. Concepts and expressions in sociology and anthropology
2. History of these two fields and their standing in social sciences\
3. Culture(structure, characteristics, its change processes and formation of different communities)
4. Cultural relativisms, genocide, assimilation
5. Sociological and anthropological theories

SOURCES

1. Studying Human Societies; Gerhard Lenski.
2. Sociology ; Anthony Giddens
3. Cultural Anthropology; Daniel Beats
4. Culture and Society; Rosamond Bilington

ASSESSMENT METHOD

Multiple choice and essay type final exam 100%

COURSE NAME: Clinical Biochemistry

NUMBER OF CREDITS: 2

COURSE TYPE: Theoretical

PREREQUISITES: Biochemistry

GENERAL AIMS

Familiarizing students with:

- Biochemical reactions in body and impairments.
- Kidney and liver functions and measurable factors to evaluate kidney and liver functions.
- Clinical biochemical experiments and their use in disease diagnosis

COURSE DESCRIPTION

All measurable factors directly related to body functions and the role of individual organs in regulating body actions are the topics covered in this course.

LEARNING OUTCOMES

Students must:

1. Know all body biochemical reactions
2. Know all related measurable factors in organ functions.
3. Know the role of the kidney in fluid and electrolyte regulation and acid-bas balance.
4. Know the role of the kidney in organic metabolism and the related impairments.
5. Know the impairments of different glands and the functions of hormones in disease diagnosis.

CONTENT

1. An introduction to clinical biochemistry and its use in disease control
2. Liquid and electrolyte related impairments
3. Acid-bas balance and the related impairments
4. Lipoproteins
 - Different lipoprotein structures
 - Lipoprotein biosynthesis
 - Impairment resulting from plasma lipoproteins increase/decrease
 - Apoproteins and their roles in diagnosis
5. Plasma proteins
 - Separation methods
 - Identification and measurement methods
 - The importance of plasma proteins in disease diagnosis
6. Clinical enzymology
 - Use of enzymes in disease diagnosis
 - Use of isoenzymes and their use in diagnosis
 - Measurement and separation of isoenzymes
7. Metabolic impairments and related diseases
 - Carbohydrates
 - Amino acids and proteins

- Fats
- 8. Rare elements metabolism
 - The roles of elements in biochemical processes
 - The relation between change in element density and diseases
 - Biochemical tests of kidney and liver functions
- 9. Hemoglobin
 - Metabolism
 - Types
 - Role in disease diagnosis
 - Prophyryns
- 10. Hormonal clinical chemistry
 - Metabolism of thyroid hormones and their changes in different diseases
 - Metabolism of parathyroid hormones and their changes in different diseases
 - Metabolisms of pituitary hormones
 - Metabolism of steroid hormones
- 11. Pregnancy and metabolic diseases

SOURCES

Clinical Chemistry; Norbet Tietz, 2002.

ASSESSMENT METHOD

Multiple choice midterm and final exam 100%

COURSE NAME: Medicinal Plants

NUMBER OF CREDITS: 2

COURSE TYPE: Theoretical

PREREQUISITES: -

GENERAL AIMS

- Giving students perspective about the status of medicinal plants
- Familiarizing students with plant systematics (kingdom, order, family, genus and species) and identification principles for nomenclature of plants
- Familiarizing students with important morphological characteristics of plants families
- Introduction of medicinal plants of Iran and the world in each described family
- Classification of medicinal plants based on treatment of different diseases and their pharmacological effects

COURSE DESCRIPTION

Familiarizing students with plant systematics and their therapeutic effects, Identification of important families and their characteristics, classification of medicinal plants based on their therapeutic effects

LEARNING OUTCOMES

Students must:

- Know the role of medicinal plants in medical and pharmaceutical sciences
- Know the correct scientific and common name of medicinal plants
- Be able to guess the families of important medicinal plants
- Know the usage of medicinal plants

CONTENT

- Definition and terminology
- Systematic classification of plants
- Important medicinal plants of Bryophytes
- Important medicinal plants of Pteridophytes
- Important medicinal plants of Gymnosperms
- Important medicinal plants of monocotyledon Angiosperms
- Important medicinal plants of dicotyledon Angiosperms
- The value of medicinal plants
- Medicinal plants affecting central nerves
- Medicinal plants affecting different parts of body and relating diseases including central nerves system, the heart and blood vessels, gastro intestinal, respiratory, genito urinary, skin and etc.

SOURCES

1. Zargari. A; Medicinal Plants, Tehran University Publications
2. Evans, W. C; Trease and Evan's Pharmacognosy, W.B Saunders Co, London 2009

ASSESSMENT METHOD

1. Multiple choice test 40%
2. Essay type test 60%

COURSE NAME: Medicinal Plants

NUMBER OF CREDITS: 1

COURSE TYPE: Practical

PREREQUISITES: -

GENERAL AIMS

- Enabling students perform microscopic and macroscopic identification of powdered medicinal herbs
- Identification of plants systematic using microscopic and macroscopic methods to identify plant systematics
- Familiarizing students with methods to collect, dry and prepare herbarium samples
- Familiarizing student with herbarium and market samples of medicinal plant
- Visiting medicinal plants museum (Herbarium and herboratum) and making plant collections

COURSE DESCRIPTION

Microscopic and macroscopic identification of medicinal plants, preparation of herbarium samples of medicinal plants, identification of herbarium and market samples of medicinal plants

LEARNING OUTCOMES

Students must:

1. Know the microscopic characterization of plants including medicinal plants
2. Be able to prepare herbarium samples of medicinal plants
3. Know the scientific and common names of medicinal plants

CONTENT

- Methods to prepare microscopic samples of different parts (leaves, flowers, fruits, roots, etc.) of medicinal plants and examining their macroscopic characteristics
- Observation and become familiar with morphological characteristics and therapeutic effects of important medicinal plants from different families

SOURCES

1. Plant Systematics; Mozaffarian
2. Medicinal Plants Identification and Analysis; Samsam Shariat
3. Upton, R., et al. (2016). American Herbal Pharmacopoeia: Botanical Pharmacognosy - Microscopic Characterization of Botanical Medicines, CRC Press, 733 pages.
4. Jackson, B. P. and D. W. Snowdon (1990). Atlas of Microscopy of Medicinal Plants, Culinary Herbs and Spices, Belhaven Press, 257 pages.

ASSESSMENT METHOD

1. Objective Structural Practical Examination (OSPE)
2. Preparation of herbarium samples of medicinal plants

3. Preparation of albums from market samples of medicinal plants
4. Quizzes and practical works during class

COURSE NAME: Pharmacognosy I
NUMBER OF CREDITS: 2
COURSE TYPE: Theoretical
PREREQUISITES: Medicinal Plants

GENERAL AIMS

Familiarizing students with:

- Definitions and principles of pharmacognosy
- Classification of natural compounds structures from carbohydrates group
- Classification of natural compounds structures from glycosides group
- Classification of natural compounds structures from terpenoids group
- Biologic, pharmacologic, therapeutic and other effects and usage of natural compounds

COURSE DESCRIPTION

Identification of structure, classification and natural compounds from carbohydrates, some glycosides and terpenoids groups and their characteristics

LEARNING OUTCOMES

Students must:

1. Be able to explain primary and secondary metabolites.
2. Be able to explain the molecular structure, pharmacological effects and usage of: carbohydrates, glycosides and terpenoids

CONTENT

- Definition and principles of pharmacognosy
- History
- Value and importance of pharmacognosy
- Carbohydrates; principles, therapeutic effects, usage, chemical structures and natural sources including:
 - a. Sugars (Saccharides)
 - b. Fibers
 - c. Starches
 - d. Fructans
 - e. Algal gelling agents
 - f. Gums and Mucilages
 - g. Miscellaneous carbohydrates structures
- Glycosides; principles, therapeutic effects, usage, chemical structures and natural sources including:
 - a. Cyanogenic glycosides
 - b. Glucosinolates and their glycosides
 - c. Anthraquinones and their glycosides
- Terpenoids; principles, therapeutic effects, usage, chemical structures and natural sources including:

- a. Monoterpenes and essential oils
- b. Sesquiterpenes
- c. Diterpenoids
- d. Sesterterpenes
- e. Triterpenoids
- f. Saponins and steroids
- g. Cardenolides and bufadienolides
- h. Tetraterpenes- carotenoids
- i. Polyterpenoids
- j. Miscellaneous terpenoids structures

SOURCES

1. Robbers, J.E, Speedie, M.K and Tyler V.E: Pharmacognosy and Pharmacobiotechnology. Williams and Wilkins, Baltimore(1996)
2. Evans W.C: Trease and Evan's Pharmacognosy. W.B Saunders Co, London (2009)

ASSESSMENT METHOD

1. Multiple choice test 40%
2. Essay type test 60%

COURSE NAME: Pharmacognosy II

NUMBER OF CREDITS: 3

COURSE TYPE: Theoretical

PREREQUISITES: Pharmacognosy I

GENERAL AIMS

Familiarizing students with:

- Classification of natural compounds structures from alkaloid group
- Classification of natural compounds structures from phenolic group
- Classification of natural compounds structures from lipid group
- Classification of natural compounds structures from resin group
- Biologic, pharmacologic, therapeutic and other effects and usage of natural compounds
- Herbal drugs (dosage forms, active ingredients and its structure, mechanism of actions, adverse effects, cautions and contraindications)
- Toxic plants and mushrooms
- Special topics in pharmacognosy including preparation and control of herbal drugs and supplements, traditional and complementary medicines

COURSE DESCRIPTION

Identification of structure, classification and natural compounds from alkaloids, phenolics, lipids and resins groups and their characteristics, familiarization with herbal drugs, familiarization with preparation and control of herbal drugs

LEARNING OUTCOMES

Students must:

1. Be able to explain the molecular structure, pharmacological effects and usage of: alkaloids, phenolic compounds, lipids and resins
2. Know herbal drugs and their usage
3. Be able to explain preparation and control of herbal drugs
4. Know principles of traditional and complementary medicines

CONTENT

- Alkaloids; principles, therapeutic effects, usage, chemical structures and natural sources including:
 - a. Introduction
 - b. Ornithine derived alkaloids
 - c. Tropane alkaloids
 - d. Pyrrolizidine derived alkaloids
 - e. Lysine derived alkaloids
 - f. Phenylalanine and tyrosine derived alkaloids
 - g. Isoquinoline alkaloids
 - h. Tryptophan derived alkaloids
 - i. Indolizidine alkaloids
 - j. Imidazole alkaloids

- k. Purine alkaloids
 - l. Pyridine and piperidine alkaloids
 - m. Terpenoidal and steroidal alkaloids
- Phenolics; principles, therapeutic effects, usage, chemical structures and natural sources including:
 - a. Simple phenolic compounds
 - b. Coumarins and their glycosides
 - c. Naphthoquinones and their glycosides
 - d. Chromones and xanthenes
 - e. Flavonoids and their glycosides
 - f. Anthocyanins and their glycosides
 - g. Lignans and lignins
 - h. Tannins
 - i. Miscellaneous phenolics structures
- lipids; principles, therapeutic effects, usage, chemical structures and natural sources including:
 - a. Oils
 - b. Fats
 - c. Waxes
- Resins; principles, therapeutic effects, usage, chemical structures and natural sources including:
 - a. Oleoresins
 - b. Gumresins
 - c. Oleogumresins
 - d. Balsams
- Herbal drugs (dosage forms, active ingredients and its structure, mechanism of actions, adverse effects, cautions and contraindications)
- Toxic plants and mushrooms
- Nutraceuticals and natural sources of vitamins and hormones
- Special topics in pharmacognosy including preparation and control of herbal drugs and supplements, traditional and complementary medicines

RESOURCES

1. Robbers, J.E, Speedie, M.K and Tyler V.E: Pharmacognosy and Pharmacobiotechnology. Williams and Wilkins, Baltimore(1996)
2. Evans W.C: Trease and Evan's Pharmacognosy. W.B Saunders Co, London (2009)

ASSESSMENT METHOD

1. Multiple choice test 40%
2. Essay type test 60%

COURSE NAME: Pharmacognosy II

NUMBER OF CREDITS: 2

COURSE TYPE: Practical

PREREQUISITES: Pharmacognosy I

GENERAL AIMS

- Gaining proficiency in extraction, separation, identification and qualitative and quantitative controls of natural sources and compounds
- Preparation the ability for research in the field of pharmacognosy
- Gaining proficiency to work in herbal drugs companies

COURSE DESCRIPTION

Familiarization with different extraction and chromatographic methods, identification, quality and quantity controls of natural compounds

LEARNING OUTCOMES

Students must:

1. Know the reason of using different extraction methods and solvents
2. Know the different chromatographic methods and principles for separation of natural compounds
3. Know the reactions and reagents for identification of different classes of secondary metabolites
4. Know the methods for quality and quantity controls of natural compounds

CONTENT

- Different extraction methods including:
 - a. Distillation for essential oils
 - b. Soxhlet
 - c. Maceration
 - d. Decoction
- Different chromatographic methods including:
 - a. Thin Layer Chromatography
 - b. Column Chromatography
- Identification of:
 - a. Valproates
 - b. Coumarins
 - c. Cyanogenic glycosides
 - d. Herbal acids
 - e. Saponins
 - f. Alkaloids
 - g. Sterols
 - h. Cardiac glycosides
 - i. Anthraquinones
 - j. Flavonoids and anthocyanins
 - k. Tannins
- Quantification of:
 - a. Humidity and ash
 - b. Starches

- c. Pectin
- d. Anthraquinones
- e. Purine alkaloid (caffeine)
- f. Saponin (Glycyrrhizin)

COURSE NAME: Ethics in Pharmacy

NUMBER OF CREDITS: 1

COURSE TYPE: Theoretical

PREREQUISITES: -

GENERAL AIMS

Because of the importance of the relations between the patients and the pharmacist and the significance of services provided by the pharmacist, students are familiarized with ethics in pharmaceutical sciences in particular, and Islamic values in general.

COURSE DESCRIPTION

Because of the direct contact between patients and pharmacist, proper interaction with patients and maintaining ethical values are taught in this course.

LEARNING OUTCOMES

Students must:

- Have a high command of ethical principles and values.
- Have the proper decision making abilities in case of ethical dilemmas

CONTENT

- Definition of ethics and ethical principles
- Ethical philosophy and ethical theories
- Role and standing of ethics in pharmacy
- Principles of ethics in Iran and Islam
- Pharmaceutical ethics in west
- Doctor- patient relationship
- Ethical dilemmas
- Ethical principles in pharmacy

SOURCES

Remington's Pharmaceutical sciences, Ethics

ASSESSMENT METHOD

1. Research in the existing ethical literature 30%
2. Essay type and multiple choice test 70%

COURSE NAME: Medicinal Chemistry I

NUMBER OF CREDITS: 3

COURSE TYPE: Theoretical

PREREQUISITES: General Chemistry, Organic Chemistry, Pharmacology I

GENERAL AIMS

- 1) Students' familiarity with the fundamentals of medicinal chemistry and drug design
- 2) Students' familiarity with the relationship between the chemical structure of the drug and receptor and the relationship between the structure and effects, side effects and drugs' Pharmacokinetics.
- 3) Application of learned material in the formulation of drugs and synthesis of raw materials.

COURSE DESCRIPTION

Fundamentals of drug design and chemical structure of different groups of drugs and therefore different methods of synthesis of raw materials are discussed.

LEARNING OUTCOMES

- 1) Students should be able to interpret the basic concepts of medicinal chemistry and drug design.
- 2) Using chemical structure of the drugs, students should be able to comment on the effects, side effects and drug kinetics.
- 3) They should know the concept of optimal medication use.
- 4) They should interpret the methods of synthesis of raw materials.
- 5) Students must know the structure of different antibiotics in each category.

CONTENT

- 1) The effect of physicochemical properties of drugs on absorption and distribution of drugs.
- 2) Structure of receptors and drug-receptor forces.
- 3) The effect of the chemical, stereochemical and bioisosteric structures on drug action.
- 4) Quantitative relationship between structure of drugs and biological activity and the use of computers.
- 5) Drug metabolism
- 6) Sulfonamides
- 7) Antiseptics
- 8) Penicillins
- 9) Non-classical beta-lactams (Beta lactamase and Monobactam inhibitors)
- 10) Cephalosporins
- 11) Quinolones
- 12) Tetracyclines
- 13) Amino glycosides
- 14) Polypeptides antibiotics and macrolides, Other antibiotics.
- 15) Radiopaques
- 16) Anti-fungal, anti-parasite, anti-amoeba drugs.
- 17) Anti-virus drugs

18) Anticancer drugs

SOURCES:

1. William O. Foye, Thomas L. Lemke, David A Williams. Principles of Medicinal Chemistry, Williams and Wilkins; U.S.A, last editon.
2. James N. Delgado, Williams A. Remer, Wilson and Gisvold's Textbook of Organic Medicinal and Pharmaceutical Chemistry, J.B Lippincott Company, Philadelphia, last edition.
3. Andrejus Korokovas, Essentials of Medicinal Chemistry, John Wiley and Sons U.S.A last edition.

ASSESSMENT METHOD:

1. Essay type exam: 50 %
2. Multiple choice exam: 35%
3. Oral presentation:15%

COURSE NAME: Medicinal Chemistry II

NUMBER OF CREDITS: 3

COURSE TYPE: Theoretical

PREREQUISITES: Medicinal Chemistry I, Pharmacology II

GENERAL AIMS

- 4) Students' familiarity with the fundamentals of medicinal chemistry and drug design
- 5) Students' familiarity with the relationship between the chemical structure of the drug and receptor and the relationship between the structure and effects, side effects and drugs' Pharmacokinetics.
- 6) Application of learned material in the formulation of drugs and synthesis of raw materials.

COURSE DESCRIPTION

Fundamentals of drug design and chemical structure of different groups of drugs and therefore different methods of synthesis of raw materials are discussed.

LEARNING OUTCOMES

- 6) Students should be able to interpret the basic concepts of medicinal chemistry and drug design.
- 7) Using chemical structure of the drugs, students should be able to comment on the effects, side effects and drug kinetics.
- 8) They should know the concept of optimal medication use.
- 9) They should interpret the methods of synthesis of raw materials.
- 10) Students must know the structure of different antibiotics in each category.

CONTENT

1. Cholinergic and anticholinergic drugs
2. Anticholinesterases
3. Histamine and antihistamines
4. Anesthetics
5. Adrenergic and antiadrenergic drugs
6. Thyroid drugs
7. Diuretics
8. Hypothalamus and hypophysis hormones
9. Antihypertensive drugs
10. Anticoagulants
11. Antihyperlipidemics
12. Cardiac glycosides
13. ACE inhibitors.
14. Adrenocorticoids
15. Estrogen and antiestrogens
16. Progestron and antiprogestrons
17. Androgen and antiandrogens
18. Anabolics

19. Antidiabetics

SOURCES:

1. William O. Foye, Thomas L. Lemke, David A Williams. Principles of Medicinal Chemistry, Williams and Wilkins; U.S.A, last edition.
2. James N. Delgado, Williams A. Remer, Wilson and Gisvold's Textbook of Organic Medicinal and Pharmaceutical Chemistry, J.B Lippincott Company, Philadelphia, last edition.
3. Andrejus Korokovas, Essentials of Medicinal Chemistry, John Wiley and Sons U.S.A last edition.

ASSESSMENT METHOD:

1. Essay type exam: 50 %
2. Multiple choice exam: 35%
3. Oral presentation: 15%

COURSE NAME: Medicinal Chemistry III

NUMBER OF CREDITS: 3

COURSE TYPE: Theoretical

PREREQUISITES: Medicinal Chemistry II

GENERAL AIMS

- 7) Students' familiarity with the fundamentals of medicinal chemistry and drug design
- 8) Students' familiarity with the relationship between the chemical structure of the drug and receptor and the relationship between the structure and effects, side effects and drugs' Pharmacokinetics.
- 9) Application of learned material in the formulation of drugs and synthesis of raw materials.

COURSE DESCRIPTION

Fundamentals of drug design and chemical structure of different groups of drugs and therefore different methods of synthesis of raw materials are discussed.

LEARNING OUTCOMES

- 11) Students should be able to interpret the basic concepts of medicinal chemistry and drug design.
- 12) Using chemical structure of the drugs, students should be able to comment on the effects, side effects and drug kinetics.
- 13) They should know the concept of optimal medication use.
- 14) They should interpret the methods of synthesis of raw materials.
- 15) Students must know the structure of different antibiotics in each category.

CONTENT

- 1) Bicyclic and tricyclic antidepressants
- 2) Monocyclic antidepressants
- 3) MAO Inhibitors
- 4) Anti-psychosis
- 5) Dopamine agonists and antagonists
- 6) Anti-Parkinson drugs
- 7) Hypnotic drugs
- 8) Anti-anxiety drugs and muscle relaxants
- 9) Antiepileptic drugs
- 10) GABA agonists and antagonists
- 11) Benzodiazepines
- 12) Non-benzodiazepine anti-anxiety drugs
- 13) Central analgesics
- 14) Opioid antagonists
- 15) Narcotic antagonists
- 16) Hallucinogens
- 17) Drugs that affect mucus
- 18) Non-steroidal anti-inflammatory drugs

19) Drugs for neurodegenerative diseases (Parkinson's, Alzheimer, Huntington, ALS)

SOURCES:

1. William O. Foye, Thomas L. Lemke, David A Williams. Principles of Medicinal Chemistry, Williams and Wilkins; U.S.A, last editon.
2. James N. Delgado, Williams A. Remer, Wilson and Gisvold's Textbook of Organic Medicinal and Pharmaceutical Chemistry, J.B Lippincott Company, Philadelphia, last edition.
3. Andrejus Korokovas, Essentials of Medicinal Chemistry, John Wiley and Sons U.S.A last edition.

ASSESSMENT METHOD

1. Essay type exam: 50 %
2. Multiple choice exam: 35%
3. Oral presentation: 15%
4. Lab report: _

COURSE NAME: Pharmacology I

NUMBER OF CREDITS: 3

COURSE TYPE: Theoretical

PREREQUISITES: Physiology II, Biochemistry

GENERAL AIMS:

students' familiarity with autonomic nervous system drugs, Pharmacodynamics, Drugs on neuromuscular transmission , Pain medications , Antibiotics , digestive system drugs and Skin Medications and -The mechanism of these drugs.

COURSE DESCRIPTION:

Considering that one of the most vital and important part of pharmacy education is familiarity with medications and how they work, Therefore, in this study the mechanism of action of drugs, Different groups of drugs, The absorption and excretion of drugs, Medications interactions with other compounds in the body, Kinetics of drugs and their proper usage are discussed.

LEARNING OUTCOMES

Students should be able:

- To interpret generalities about receptors and secondary messenger pharmacodynamics.
- To explain the various stages of clinical assessment of drugs.
- To describe different drug groups and interpret their mechanisms.
- To explain the different types of chemical carriers and related drugs.
- To list the uses of medications.
- To classify the medications and their uses.
- To explain the variety of side effects of drugs and how to avoid complications.
- To explain the principles of drug-drug interactions and food- drug interactions.
- To illustrate the proper use of drugs in specific groups (Pregnancy, breastfeeding, children and the elderly, and certain diseases)
- To explain generalities about pharmacogenetics.
- To present the correct ways of taking medications.
- To explain the effects of various diseases on the pharmacodynamics and pharmacokinetics.
- To interpret the general principles of prescribing.
- To explain the drug abuse and measures to reduce or prevent it.
- To be familiar with the latest advances in the field of new medications and their advantages compared to previous medications.

CONTENT

1) Generalities of Pharmacology (Definitions)

Pharmacodynamics, Medical receptors and the mechanism of drug-receptor interactions.

Pharmacokinetics: Absorption Distribution Metabolism and excretion.

Basic and clinical assessment of drugs.

- 2) medications affecting the autonomic system
 - Introduction to Pharmacology autonomic system
 - Cholinergic medications
 - Anticholinergics
 - Adrenergic medications
 - Anti-adrenergic medications
- 3) Medications affecting neuromuscular transmission.
 - Histamine and medications affecting it
 - Serotonin and medications affecting it
 - Platelet-activating factor and medications affecting it
 - Quinine and medications affecting it
 - Eicosanoids: Prostaglandins, Thromboxane, Leukotrienes.
- 4) Chemotherapeutic agents
 - a- Antibiotics
 - History and principles of application of chemotherapy agents.
 - Sulfonamides, Sulfones, trimethoprim.
 - Beta-lactams: penicillin, cephalosporins, betalactamase inhibitors)
 - Floro quinolones, Nitrofurans, metnamin
 - Aminoglycosides, Polymyxin.
 - Tetracyclines, Chloramphenicol, Macrolides.
 - Anti-tuberculosis and Leprosy
 - b- Disinfectants
 - c- Antifungal drugs
 - d- Anti-virus drugs
 - e- protozoa and other protozoa
- 5) Skin Medications
- 6) Gastrointestinal Drugs
- 7) The using medications in specific groups
 - Pregnancy, breastfeeding, children and the elderly, and certain diseases.
- 14) Selection of OTC Medications.
- 15) Drug poisoning and Coping Strategies

SOURCES

1. Basic and Clinical Pharmacology ; Bertram G.K Wtzung
2. Pharmacology; H.P Rang/ M.M. DALE

ASSESSMENT METHOD

1. Essay type exam: 60 %
2. Multiple choice exam: 30%
3. Oral presentation:10%

COURSE NAME: Pharmacology II

NUMBER OF CREDITS: 3

COURSE TYPE: Theoretical

PREREQUISITES: Pharmacology I

GENERAL AIMS

The help students learn to study the mechanism of action of drugs and their adverse effects, Food-drug interactions, interpreting the amount of consumption in times of need.

COURSE DEFINITION

Considering that one of the most vital and important part of pharmacy education is familiarity with medications and how they work, Therefore, in this study the mechanism of action of drugs, Different groups of drugs, The absorption and excretion of drugs, Medications interactions with other compounds in the body, Kinetics of drugs and their proper usage are discussed.

LEARNING OUTCOMES

Students should be able:

- To interpret generalities about receptors secondary messengers
- To explain the various stages of clinical assessment of drugs.
- To explain the different categories of clinical assessment of drugs.
- To explain the role of various chemical carriers, and related Medications.
- To classify the medications and their uses.
- To explain the variety of side effects of drugs and How to avoid complications
- To explain the principles of drug-drug interactions and food- drug interactions.
- To illustrate the proper use of drugs in specific groups (Pregnancy, breastfeeding, children and the elderly, and certain diseases)
- To explain generalities about pharmacogenetics.
- To present the correct ways of taking medications.
- To explain the effects of various diseases on the pharmacodynamics and pharmacokinetics.
- To interpret the general principles of prescribing.
- To explain the drug abuse and measures to reduce or prevent it.
- To be familiar with the latest advances in the field of new medications and their advantages compared to previous medications.
- To interpret the principles of Medical advice and be able to use them In dealing with patients.

CONTENT

- 1) Nonsteroidal anti-inflammatory Medications, Non-narcotic pain medications and anti-gout.
- 2) local anesthetic
- 3) Narcotic pain medications and their antagonists.
- 4) Drug abuse
- 5) Medications affecting the cardiovascular system

- Factors affecting the renin-angiotensin system.
- Antihypertensive medications
- Diuretic drugs
- Anti-angina Medications.
- Drugs used in cardiac congestion
- Drugs used in Cardiac Arrhythmias.
- Drugs used in hyperlipidaemia
- 6) Respiratory drugs(Anti-asthma , cough medicine and ...)
- 7) Adrenocorticoids
- 8) Hormones

SOURCES

4. Basic and Clinical Pharmacology ; Bertram G.K Wtzing
5. Pharmacology; H.P Rang/ M.M. DALE

ASSESSMENT METHOD

1. Essay type exam: 60 %
2. Multiple choice exam: 30%
3. Oral presentation:10%

COURSE NAME: Pharmacology III

NUMBER OF CREDITS: 3

COURSE TYPE: Theoretical

PREREQUISITES: Pharmacology II

GENERAL AIMS

The help students learn to study the mechanism of action of drugs and their adverse effects, Food-drug interactions, interpreting the amount of consumption in times of need.

COURSE DEFINITION

Considering that one of the most vital and important part of pharmacy education is familiarity with medications and how they work, Therefore, in this study the mechanism of action of drugs, Different groups of drugs, The absorption and excretion of drugs, Medications interactions with other compounds in the body, Kinetics of drugs and their proper usage are discussed.

LEARNING OUTCOMES

Students should be able:

- To interpret generalities about receptors secondary messengers
- To explain the various stages of clinical assessment of drugs.
- To explain the different categories of clinical assessment of drugs.
- To explain the role of various chemical carriers, and related Medications.
- To classify the medications and their uses.
- To explain the variety of side effects of drugs and How to avoid complications

- To interpret the general principles of prescribing.
- To explain the drug abuse and measures to reduce or prevent it.
- To be familiar with the latest advances in the field of new medications and their advantages compared to previous medications.
- To interpret the principles of Medical advice and be able to use them In dealing with patients.

CONTENT

- 9) Medications affecting the cardiovascular system
 - Factors affecting the renin-angiotensin system.
 - Antihypertensive medications
 - Diuretic drugs
 - Anti-angina Medications.
 - Drugs used in cardiac congestion

- Drugs used in Cardiac Arrhythmias.
- Drugs used in hyperlipidaemia
- 10) Respiratory drugs(Anti-asthma , cough medicine and ...)
- 11) Medications affecting the central nervous system.
 - Introduction to Central Nervous System Pharmacology.
 - Sedatives and hypnotics
 - Alcohols
 - Antiepileptic Drugs
 - General anesthetics
 - Drugs used in parkinsonism and other movement disorders
 - Antidepressants
 - Lithium and mania
 - Anti-psychotic drugs
- 12) Drugs used for blood disorders
 - Medications used for anemia
 - Drugs used in coagulation disorders.
- 13) Medications affecting the endocrine system:
 - The hypothalamus-pituitary hormones
 - Drugs used in hypothyroidism and hyperthyroidism
 - Pancreatic hormones and Medications Used for diabetes
- 14) Drugs used for cancer
- 15) Principles of Gene Therapy
- 16) Immunopharmacology
- 17) Drugs used for skeletal disorders
- 18) Drugs Interactions
- 19) Drug allergies and idiosyncrasy

SOURCES

6. Basic and Clinical Pharmacology ; Bertram G.K Wtzung
7. Pharmacology; H.P Rang/ M.M. DALE

ASSESSMENT METHOD

4. Essay type exam: 60 %
5. Multiple choice exam: 30%
6. Oral presentation:10%

COURSE NAME: Toxicology

NUMBER OF CREDITS: 2

COURSE TYPE: Theoretical

PREREQUISITES: Pharmacology III

GENERAL AIMS

Contributing to learn the mechanism of toxicity and to classify different types of toxic toxins.

COURSE DESCRIPTION

Since the drug acts as a poison if consumed over a certain amount, it is necessary to learn all kinds of toxins, including pharmaceutical and non-pharmaceutical, as well as the effect of these compounds on different body systems and how to deal with poisoning. These issues will be discussed in detail in this course.

LEARNING OUTCOMES

After completing the course students will: Identify the mechanism of action of toxins after the classification.

CONTENT

1) Generalities of Toxicology (History - Definition - Classification - toxic exposure)

2) Toxicokinetics

Absorption of toxic substances in biological systems, Cell membrane, Transportation of toxic substances out of the cell membrane, The absorption of toxic substances), Distribution of toxic conditions in the body, Levels of plasma, Half-life, AUC, Half-life, protein binding, Accumulation of toxins in the body, Excretion of toxins from the body and the influential factors (Urinary excretion , biliary excretion)

3) Metabolism of toxic compounds, Purpose of the metabolism in the body, Metabolism the consequences of, Phase 1 reactions (puse Cytochrome).

Phase1 reactions (oxidation – reduction, hydrolysis), Phase 2 reactions (Conjugation)

Reactions causing toxic and detoxification reactions, Factors affecting toxic responses.

4) Types of exposure and toxic responses

(acute and chronic exposure, Ways of exposure, Types of toxic responses including Direct toxic effect, Biochemical damage, Physiological and pharmacologic effects, immunotoxicity, carcinogenicity, Biological markers.

Selective effects of toxins on organ including:

5) Respiratory toxins

1) Mitochondrial toxicity

2) The toxicity of red blood cells

6) CNS toxins

1) Excitotoxicity Seizure

2) Alcohol and hallucinogens

7) Toxicity of drugs

(Types of drug toxicity 1- side effects 2- Idiosyncrasy, Acetaminophen, Aspirin, Hydralazine, Halothane, Thalidomide, G-6-P-D shortage.

- 8) Natural toxins
- 9) Animal toxins
- 10) Fungal and plant toxins

SOURCES

1. Toxicology; Casarett and Doull
2. Poisoning and Drug Overdose; Haddad Winchester
3. Natural Toxin; John Harris

ASSESSMENT METHOD

1. Multiple choice exam: 60%
2. Case study: 40%

COURSE NAME: Toxicology

NUMBER OF CREDITS: 1

COURSE TYPE: Practical

PREREQUISITES: Pharmacology III

GENERAL AIMS

Helping to learn how to treat poisoning, emergency operations, treatment of poisoning, Emergency operations and treatment of poisoning, experimental detection of toxins and methods of extraction from different tissues.

COURSE DESCRIPTION

Different methods to detect chemical toxins and drugs on animals, as well as determining cytotoxicity of various compounds as toxic agents are introduced in this section and will be taught.

LEARNING OUTCOMES

After completing the course the student should be able to extract various toxins from the tissues and various means and then identify them. Need to know how to deal with the toxic emergency procedures.

CONTENT

- 1) Generalities and principles of extraction: Of biological fluids and tissues, Non-biological environments
- 2) Extraction and identification of alkaline toxins
- 3) Extraction and identification of acidic toxins
- 4) Methods to identification and estimating the amount of metal toxins
- 5) Methods for Extraction and quantification and identification of organophosphate pesticide
- 6) Methods to quantify and identify the volatile toxins.(1)
- 7) Methods to quantify and identify the volatile toxins.(2)
- 8) The methods of extraction and determination of opioid
- 9) Toxicity tests with animals
- 10) Toxicity testing in animals and study the effect of antidotes
- 11) Tests of carcinogenic compounds identification
- 12) Cell assays (cell culture)
- 13) Extraction and isolation of Primary cells

SOURCES

1. Isolation and Identification of Drugs, Clarke
2. Medical Toxicology, Elenthorn
3. Poisoning and Drug Overdose, Haddad Winchester
4. Natural Toxin, John Harris
5. Toxicology, Cassarette and Doll
6. Remington
7. Current content

ASSESSMENT METHOD

1. Essay type exam: 20 %
2. Multiple choice exam: 10%
3. Evaluating the ability to perform practical work: (50%)

COURSE NAME: Drug and Chemical Poisoning Management

NUMBER OF CREDITS: 2

COURSE TYPE: Theoretical

PREREQUISITES: Toxicology – Pharmacology III and First Aid

GENERAL AIMS

Helping students in terms of how to deal with poisoned people, providing emergency assistance, Familiarity with of poisoning antidotes

COURSE DESCRIPTION

Necessary knowledge on how to deal with people who have taken too many drugs. So their familiarity with toxicity of chemical compounds and drugs, as well as how to deal with the subjects is the main objective of this course.

LEARNING OUTCOMES

1. Students should know the common pharmaceutical and non-pharmaceutical poisonings.
2. Students must interpret the methods of controlling common poisonings and detoxification of body.
3. Students must know how to deal with poisoned patients.
4. Students must know the antidotes.

CONTENT

- 1) Emergency treatment of poisoning
- 2) Toxicity of oil and acid and alkaline and detergents
- 3) Poisoning caused by bleaches and antiseptics and pesticides
- 4) Toxicity of chemical and biological weapons
- 5) Poisoning caused by cardiovascular drugs
- 6) Poisoning caused by neuroleptic and antidepressants.
- 7) Poisoning caused by tranquilizers and sleep aids
- 8) Poisoning caused by nonsteroidal anti-inflammatory drugs – acetaminophen
- 9) Poisoning caused by gases and solvents
- 10) Toxicity of metals
- 11) Food toxicity, food Additives and Supplements.

SOURCES

1. Medical Toxicology, Elenthorn
2. Poisoning and Drug Overdose, Haddad Winchester
3. Natural Toxin, John Harris
4. Toxicology, Cassarette and Doll

ASSESSMENT METHOD

1. Multiple-choice questions and essay: 80%
2. Providing a model of toxicity and its treatment theoretically: 20%

COURSE NAME: Physical Pharmacy I

NUMBER OF CREDITS: 2

COURSE TYPE: Theoretical

PREREQUISITES: -

GENERAL AIMS

- Students' familiarity with physicochemical principles and concepts in formulation of pharmaceutical preparations.
- Students' familiarity with bands and isotonic solutions
- The physicochemical principles and concepts in manufacturing drugs and also physical laws interfering in the preparation of drugs and their formulations are discussed in this course.

COURSE DESCRIPTION

The use of physicochemical fundamentals in drug preparation and the physical laws affecting drug formulations are discussed in this course.

LEARNING OUTCOMES

Students must:

- Interpret principles of the isotonic solution and buffer preparation.
- Name the Factors affecting the solubility of drugs and methods of increasing the speed of dissolution.
- Explain the concepts of thermodynamics.
- Explain different states of materials (solid, liquid, gas and liquid crystal).
- Explain the effect of temperature, Polymorphism etc. on Drugs' Formulation and Stability.
- List different methods to prepare Isotonic and buffered solutions.
- Interpret the importance of dissolution in drug formulation.
- Explain the properties of non-electronic solutions and its application in pharmaceuticals.
- Interpret the difference between real and ideal solutions.
- Explain Calculation of the pH
- Explain the concept of complex of and its types.

CONTENT

- 1) The status of Physical pharmacy in pharmaceuticals
- 2) Application of equilibrium phases in pharmaceuticals.
- 3) Phase curve drawing (two-variable and three-variable)
- 4) phases equilibrium and liquid crystal
- 5) Actual and ideal solutions
- 6) Application of laws of the vapor pressure (in aerosols), Decreasing freezing point, osmotic pressure and increasing boiling point.
- 7) Activity coefficient of the acid and base and solvent, ionic strength

- 8) Calculation of the pH, strong acids and bases, conjugate pairs and acid and base, Independent pairs of acid and base and its application in the preparation of pharmaceutical products
- 9) Buffers in pharmaceuticals
- 10) Isotonic solution
- 11) Application and importance of the complex formation and the bonding of drugs to protein.

SOURCES

1. Physical Pharmacy; Mantin
2. Pharmaceutical Sciences; Remington
3. Physicochemical Principles of Pharmacy; Attwood
4. Pharmaceutis; Aulton

ASSESSMENT METHOD

Mid-term exam (Essay and multiple choice) : 30%

Final exam (Essay and multiple choice) : 40%

Problem solving: 30%

COURSE NAME: Physical Pharmacy II
NUMBER OF CREDITS: 2
COURSE TYPE: Theoretical
PREREQUISITES: Physical Pharmacy I

GENERAL AIMS

- 1) Students' familiarity with the laws of diffusion, micrometrics
- 2) Students' familiarity with the definition of particle size and techniques of particle size measurement.
- 3) Students' familiarity with the speed and degree of reactions, definitions of surface tension
- 4) Students' familiarity with the laws of rheology
- 5) Students' familiarity with distributed systems and polymers

COURSE DESCRIPTION

- In this course physicochemical principles and concepts in manufacturing of drugs and also the physical laws affecting the preparation and formulation of medicines are discussed.

LEARNING OUTCOMES

- 1) Students interpret the diffusion phenomenon and its dissemination and importance in the Pharmacy.
- 2) Students interpret the various methods of measuring the particle diameter.
- 3) Students interpret the size distribution of particles.
- 4) Students name the effective factors in the sustainability and construction of distributed systems.
- 5) Students name factors affecting stability and instability of the drug.
- 6) Students interpret principles and proper storage conditions for medicines.
- 7) Students interpret the drug resistance assessment methods.
- 8) Students explain methods of determining medicine shelf life and improving it.
- 9) Students define the surface tension phenomenon and explain the method of measurement.
- 10) Students explain surfactants and their use in Pharmacy.
- 11) Students explain Newtonian and non-Newtonian systems and application of rheology in Pharmacy.
- 12) Students interpret the factors involved in the rheology of liquids and semi-solids.
- 13) Students name classifications physicochemical properties of polymers.

CONTENT

- 1) Diffusion and dissolution (Introduction of the topic, explaining and discussing the passive Diffusion and interpretation of spontaneous movement, Fick laws, the dissolution rate
- 2) Micrometrics (Definitions, size and variety of diameters, geometrical average diameter, Various techniques for measuring particle diameter Including sieve, microscopes, Sedimentation rate, and particle shape and surface measurement methods.
- 3) Clinic and sustainability (The speed and degree of the reactions, factors affecting the stability of pharmaceutical products, how to determine the sustainability and expiration date)
- 4) Interfacial phenomena (Definitions: Surface tension, surfactants, and surface tension measurements.
- 5) Rheology (Definition and classification of rheological behavior, method for measuring Viscosity)
- 6) Dispersed systems (Potential of autoflocculation, protective colloids and micro-emulsification and emulsification theory, chemical and physical sustainability of suspensions and emulsions.
- 7) Colloids: Definition and Classification of colloids(Viscosity, electrical properties, etc)
- 8) Polymers: (Definitions, types of polymers, mechanisms of polymerization, water soluble and insoluble polymers and their applications.

SOURCES

5. Physical Pharmacy; Mantin
6. Pharmaceutical Sciences; Remington
7. Physicochemical Principles of Pharmacy; Attwood
8. Pharmaceutis; Aulton

ASSESSMENT METHOD

1. Midterm exam (essay type, multiple-choice) 30%
2. Final exam (essay type, multiple-choice) 60%
3. Problem solving 10%

COURSE NAME: Pharmaceutics (Introduction)

NUMBER OF CREDITS: 2

COURSE TYPE: Theoretical

PREREQUISITE: -

GENERAL AIMS

Students' familiarity with the Old Pharmacy and the evolution of pharmacy, Method of prescribing, the recognition of different pharmaceutical forms, Pharmaceutical Resources and Pharmaceutical Calculations

COURSE DEFINITION

History and evolution of the field of pharmacy and pharmaceutical Laws; quantitative methods in Drug development, and familiarity with the structure of the country's pharmaceutical system are discussed in this section.

LEARNING OUTCOMES

- Students need to understand the field of Pharmaceutics (Manufacture, development, control and evaluation of products)
- interpret different naming systems
- Explain the different ways of prescribing.(Oral, intravenous)
- Explain Calculations needed to determine dosage and Manufacture.
- Name different primary, secondary and tertiary sources and to interpret how to use existing databases.
- Explain the country's pharmaceutical system.

CONTENT

- Introduction to the field of Pharmaceutics
- Definition and naming of drugs
- Methods of drug prescribing.
- Basic familiarity with the types of drugs
- Pharmaceutical Calculations
- References in Pharmaceutics
- Familiarity with pharmaceutical system in the country
- Definition of prescription and Abbreviations.

SOURCES

1. Remington's Pharmaceutical Sciences
2. Encyclopedia of Pharmaceutical Technology (some chapters)
3. Drug Information, a Guide to Current Resources; Bonnie Snow; 1989
4. Introduction to Pharmaceutical Dosage Forms and Drug Delivery Systems, Anset, 1995.

ASSESSMENT METHOD

1. Final exam (essay and multiple choice) : 75%
2. Research project on a drug formation (based on Pharmacopeia, the reference book

COURSE NAME: Pharmaceutics (Solid Dosage Forms)

NUMBER OF CREDITS: 3

COURSE TYPE: Theoretical

PREREQUISITES: Pharmaceutics (Introduction)

GENERAL AIMS

1. Students' familiarity with the pharmaceutical operations and formulations.
2. Students' familiarity with Pharmaceutical systems in the form of powders, tablets and capsules

COURSE DESCRIPTION

Types of pharmaceutical operations in the first stage or in other words, the pre-formulation as well as recognition of the solid dosage forms and factors involved in the design of solid drugs are discussed

LEARNING OUTCOMES

- Students should know the different operations in Pharmacy
- Students need to know the types of pre-formulation
- Students should recognize a variety of dosage forms such as tablets, capsules, powders.

CONTENT

- 1- Pharmaceutical Operations
 - 1-1 Mixing
 - 1-2 Mitting
 - 1-2-1 particle size decrease
 - 1-2-2 Particle size distribution
 - 1-2-3 measuring the diameter of the particles
 - 1-3 Drying
- 2- Pre-formulation
 - 2-1 Methods of drug intake
 - 2-2 Effective Factors in dosage form design
 - 2-2-1 Organoleptic properties
 - 2-2-2 Particle sizes and particle surfaces
 - 2-2-3 Solubility and dissolution
 - 2-2-4 The distribution coefficient and acidity
 - 2-2-5 Crystal
 - 2-2-6 Sustainability
- 3- Powder
 - 3-1 Advantages and disadvantages of powders and granules
 - 3-2 Types
 - 3-3 Manufacturing technology
 - 3-4 Packing

- 4- Packing
 - 4-1 Generalities
 - 4-1-1 history and definition
 - 4-1-2 Advantages and disadvantages
 - 4-1-3 Types of tablets (plain, chewable and sublingual)
 - 4-1-4 Tablet Features
 - 4-2 Formulation components
 - 4-2-1 Non-drug components
 - 4-2-2 Factors affecting the formulation
 - 4-3 Methods of manufacturing
 - 4-3-1 Generalities
 - 4-3-1-1 Direct compression
 - 4-3-1-2 Dry granulation
 - 4-3-1-3 Wet granulation
 - 4-3-1-4 coating
 - 4-3-2 Semi-industrial and industrial
 - 4-3-2-1 Machinery
 - 4-4 Quality Control
 - 4-4-1 Prior to production, control of raw materials,
 - 4-4-2 During production (hardness, dissolution)
 - 4-4-3 Post-production (stability and bioavailability)
 - 4-5 Categories
- 5- Capsules
 - 5-1 Generalities
 - 5-1-1 Definition and history
 - 5-1-2 Advantages and disadvantages
 - 5-1-3 Types
 - 5-1-4 Features
 - 5-2 formulation
 - 5-2-1 Capsules' components
 - 5-2-2 Factors affecting the formulation
 - 5-3 Overview of manufacturing
 - 5-3-1-1 Hard Capsules
 - 5-3-1-2 Soft capsules
 - 5-3-1-3 Microencapsulation
 - 5-3-2 Semi-industrial and industrial

5-3-2-1 Machinery

5-4 Control

5-4-1 Prior to production

5-4-2 During production

5-4-3 Post-production (Stability, bioavailability)

5-5 Packing

SOURCES

3. Remington's Pharmaceutical Sciences
4. Encyclopedia of Pharmaceutical Technology (some chapters)
5. Drug Information, a Guide to Current Resources; Bonnie Snow; 1989
6. Introduction to Pharmaceutical Dosage Forms and Drug Delivery Systems, Anset, 1995.

ASSESSMENT METHOD

1. Mid-term exam (essay and multiple choice) 40%
2. Final exam (essay and multiple choice) 60%

COURSE NAME: Pharmaceutics (Solid Dosage Forms)

NUMBER OF CREDITS: 1

COURSE TYPE: Practical

PREREQUISITES: Pharmaceutics (Introduction)

GENERAL AIMS

- 1) Practical familiarity with the methods of manufacturing of pharmaceutical powders.
- 2) Practical familiarity with the methods of manufacturing tablets and capsules

COURSE DESCRIPTION

Methods of making solid products, and the use of devices such as tablets and capsules and other solid medicines in the extent laboratory and pilot training will be given.

LEARNING OUTCOMES

- 1) Students should be able to prepare a variety of pharmaceutical powders for consumption.
- 2) Students must know all the steps manufacturing tablets and capsules

CONTENT

- 1) Powders
- 2) Granulation
 - Dry
 - Wet
- 3) Tablet manufacturing
- 4) Sugar coating
- 5) Capsule manufacturing
- 6) Microcapsules
- 7) manufacturing Capsules
- 8) Polarization methods

SOURCES

1. Remington's Pharmaceutical Sciences
2. Encyclopedia of Pharmaceutical Technology (some chapters)
3. Drug Information, a Guide to Current Resources; Bonnie Snow; 1989
4. Introduction to Pharmaceutical Dosage Forms and Drug Delivery Systems, Anset, 1995

ASSESSMENT METHOD

1. Final exam: 20%
2. Work report and formulation 80%

COURSE NAME: Pharmaceutics (Liquid Dosage Forms)

NUMBER OF CREDITS: 3

COURSE TYPE: Theoretical

PREREQUISITE: Pharmaceutics (Solid Dosage Forms)

GENERAL AIMS

Students' familiarity with Pharmaceutical systems as suspension solutions, emulsions and injectable suspensions.

COURSE DEFINITION

Manufacturing methods of solution and sterile products, and also the factors involved in the formulation of liquid products is discussed.

LEARNING OUTCOMES

- 1) Students need to know a variety of soluble drugs and methods of their manufacturing.
- 2) Student need to know the manufacturing methods and methods involved In the preparation of soluble products, suspensions and emulsions.
- 3) The student knows components used in the formulation of injectable products.
- 4) Students should know the methods of manufacturing and types of injection products.

CONTENT

- 1) Solutions
 - Generalities, advantages and disadvantages, Absorption
 - Types of solutions (Syrups, mouthwash...)
 - Components and formulations
 - Manufacturing and control methods- packing
- 2) Suspension
 - Generalities, advantages
 - Manufacturing methods
 - Control, packing and
 - Biological Properties
- 3) Emulsions
 - Generalities, components and formulations
 - Surfactants and their types
 - Factors affecting formulation
 - Methods of manufacturing, control, packing.
- 4) Microemulsions
 - Definition
 - The difference with macro emulsion
 - Features and manufacturing methods
- 5) Sterile Products
 - Injectable
 - Generalities, definitions, advantages and disadvantages.
 - Components and formulation of injectable products

- Components and formulation of serums
- Methods of manufacturing, control
- Sterile Products for ears and eyes
- Components of products

SOURCES

1. Remington's Pharmaceutical Sciences
2. Encyclopedia of Pharmaceutical Technology (some chapters)
3. Drug Information, a Guide to Current Resources; Bonnie Snow; 1989
4. Introduction to Pharmaceutical Dosage Forms and Drug Delivery Systems, Anset, 1995

ASSESSMENT METHOD

1. Final exam (essay and multiple- choice): 90%
2. Work report: 10%

COURSE NAME: Pharmaceutics (Liquid Dosage Forms)

NUMBER OF CREDITS: 1

COURSE TYPE: Practical

PREREQUISITES: Pharmaceutics (Solid Dosage Forms)

GENERAL AIMS

- Familiarizing students with solution preparation
- Familiarizing students with emulsion
- Familiarizing students with sterile products production

COURSE DESCRIPTION

Preparation of liquid and injectable products and use of devices to make these products

LEARNING OUTCOMES

Students must:

1. Be able to make different solutions
2. Know how to make emulsions
3. know how to make sterile products

CONTENT

1. lotion
2. syrup
3. suspension
4. dry and liquid emulsion
5. ampule
6. eye solution

SOURCES

1. Remington's Pharmaceutical Sciences
2. Pharmaceutics; Aulton
3. The Theory and Practice of Industrial Pharmacy; Lachmann
4. Pharmaceutical Practice; Aulton
5. Introduction to Dosage Forms and Drug Delivery System; Ansel
6. Encyclopedia of Pharmaceutical Sciences; Swarbrick

ASSESSMENT METHOD

1. Final exam 20%
2. Work report and drug preparation 80%

COURSE NAME: Pharmaceutics (Ssemi-Solids and Inhalers)

NUMBER OF CREDITS: 2

COURSE TYPE: Theoretical

PREREQUISITES: Pharmaceutics Introduction

GENERAL AIMS

Familiarizing students with drug delivery in the form of aerosols and semi-solids

COURSE DEFINITION

Fundamentals of formulation of semi-solid drugs such as aerosols, creams, ointments and gels, and the important factors in controlling these products in all production stages

LEARNING OUTCOMES

1. Students must know aerosols
2. Know all semi-solid products
3. Know how to evaluate and control semi-solids

CONTENT

1. Aerosol
 - 1-1- Introduction. Benefits and harms, different types (DPI, MDI)
 - 1-2- Absorption(topical, systemic)
 - 1-2-1- Dermal
 - 1-2-2- Epithelial
 - 1-2-3- Oral
 - 1-3- Formulation
 - 1-4- Factors affecting formulation
 - 1-4-1 Device
 - 1-4-2 Drugs
 - 1-4-3 Patients
 - 1-5- Production methods
 - 1-5-1 Lab
 - 1-5-2 Industry
 - 1-6- Control
 - 1-6-1 before
 - 1-6-2 in vitro
 - 1-6-3 after
 - 1-7- Packaging
 - 1-8- In vivo
2. Semi-solid products
 - 2-1 Fundamentals, advantages, disadvantages and types
 - 2-2 Dermal and epithelial absorption
 - 2-3 Parts and formulations
 - 2-4 Factors affecting formulation
 - 2-5 Types of semi-solid products
 - 2-5-2 creams

2-5-2 ointments

2-5-3 gels

SOURCES

7. Remington's Pharmaceutical Sciences
8. Pharmaceutics; Aulton
9. The Theory and Practice of Industrial Pharmacy; Lachmann
10. Pharmaceutical Practice; Aulton
11. Introduction to Dosage Forms and Drug Delivery System; Ansel
12. Encyclopedia of Pharmaceutical Sciences; Swarbrick

ASSESSMENT METHOD

1. Midterm exam (essay type and multiple choice) 40%
2. Final exam (essay type and multiple choice) 60%

COURSE NAME: Pharmaceutics (Semi-Solids and Inhalers)

NUMBER OF CREDITS: 1

COURSE TYPE: Practical

PREREQUISITES: Pharmaceutics Introduction

GENERAL AIMS

Familiarizing students with methods to make different semisolid products such as ointments, creams and suppositories

COURSE DESCRIPTION

Using the theoretical learnings to make semi-solid products like suppositories, ointments and the instruments used to make these drugs

LEARNING OUTCOMES

Students must

1. be able to make ointments
2. be able to make creams
3. be able to make ointments

CONTENT

1. ointment preparation
2. cream preparation
3. paste preparation (toothpaste)
4. suppository preparation

SOURCES

1. Remington's Pharmaceutical Sciences
2. Pharmaceutics; Aulton
3. The Theory and Practice of Industrial Pharmacy; Lachmann
4. Pharmaceutical Practice; Aulton
5. Introduction to Dosage Forms and Drug Delivery System; Ansel
6. Encyclopedia of Pharmaceutical Sciences; Swarbrick

ASSESSMENT METHOD

1. Final exam 20%
2. Work report and product preparation 80%

COURSE NAME: Pharmaceutics (Novel Drug Delivery Systems)

NUMBER OF CREDITS: 2

COURSE TYPE: Theoretical

PREREQUISITES: Pharmaceutics (Semi-Solids & Inhalers)

GENERAL AIMS

Familiarizing students with sterile drug delivery systems, novel pharmaceutical systems and targeted delivery

COURSE DEFINITION

Due to the progress in pharmaceutical sciences and introduction of novel drugs to the market this course covers these drugs (peptide and protein) and the tools and substances that control absorption of these drugs.

LEARNING OUTCOMES

Students must:

1. Know the fundamentals of making novel drugs and delivery systems
2. Know protein and peptide drugs

CONTENT

1. Familiarizing student with new drug delivery systems
 - 1-1- Fundamentals, history, types, advantages and disadvantages
 - 1-2- Fundamentals of designing novel pharmaceutical systems
 - 1-3- Fundamentals of polymer and release mechanisms
- 2- Implanted drug delivery systems
- 3- Injectable drop-wise delivery systems
- 4- Peptide and protein delivery systems
- 5- Targeted drug delivery systems
- 6- Colon targeted drug delivery systems

SOURCES

1. Remington's Pharmaceutical Sciences
2. Pharmaceutics; Aulton
3. The Theory and Practice of Industrial Pharmacy; Lachmann
4. Pharmaceutical Practice; Aulton
5. Introduction to Dosage Forms and Drug Delivery System; Ansel
6. Encyclopedia of Pharmaceutical Sciences; Swarbrick

ASSESSMENT METHOD

Multiple choice and essay type test 100%

COURSE NAME: Hygiene &Cosmetic Products

NUMBER OF CREDITS: 2

COURSE TYPE: Theoretical

PREREQUISITE: Pharmaceutics (Semi-Solids & Inhalers)

GENERAL AIMS

Familiarizing students with different types of cosmetic products (effect mechanisms, formulations and the functions of each ingredient), knowing skin, hair and nail structures and the use of these products.

COURSE DESCRIPTION

Having sufficient knowledge of cosmetic products is central to a pharmacist's work and therefore students are familiarized with these products and making them.

LEARNING OUTCOMES

Student must:

1. Know formulation substances and cosmetic production technologies
2. Know substitute substances for some formulation compounds
3. Know creams, lotions and the differences between products

CONTENT

1. Know skin, hair and nail physiology and the importance of water in skin hydration
2. Different creams and lotions such as moisturizer, lightning, softener and foundation
3. Sunscreen products, sun burn mechanisms
4. Shampoos, their different types, evaluations and bath products
5. Depilatory products, mechanisms and formulations
6. Cleansing products and soaps
7. Dentifrices
8. Hair, hair fall, hair color and formulations
9. Pediatric products
10. Face mask, anti-wrinkle products and scrubs

SOURCES

1. Balsam N.S and Suguin E, Cosmetic Science and Technology (last edition), Volume 1,2,3
2. Harry R.G; Cosmeticology: George Goodwin (last edition)
3. Cosmetic Formulary, Wilknson J.B Moor
4. Barry B.W, Dermatological Formulation
5. Skin and Skin Care Products; Dr. Masood Adrangi
6. Cosmetic Products, Isfahan University of Medical Sciences, 1373; Dr. Seyed Manouchehr Aravi

ASSESSMENT METHOD

1. Multiple choice exam
2. Final exam

3. Seminars on novel cosmetic products

COURSE NAME: Pharmacotherapy I
NUMBER OF CREDITS: 3
COURSE TYPE: Theoretical
PREREQUISITES: Pharmacology II

GENERAL AIMS

Introduction to pharmacotherapy of common diseases based on pathophysiological, pharmacokinetic and pharmacological principles

COURSE DESCRIPTION

One of the major roles of the pharmacists is to provide other healthcare professionals efficient guidance in the area of pharmacotherapy.

Therapeutics is an applied course designed to prepare students to pursue careers in therapeutic services. Upon completion of this course, a proficient student will be able to identify careers in therapeutics services; assess, monitor, evaluate, and report patient health status; and identify the purpose and components of treatments.

Therefore in this course students learn about pathophysiology of common diseases, their signs and symptoms, diagnostic methods, pharmacologic and non-pharmacologic therapies and prevention.

LEARNING OUTCOMES

Students must:

- Know epidemiological properties of each disease
- Know the applications and interpretations of diagnostic tests
- Know pathophysiological properties of diseases
- Know the signs/symptoms of diseases
- Know pharmacologic and non-pharmacologic treatments of each disease
- Know the importance of economy in pharmacotherapy
- Know evidence based pharmacotherapy
- Know therapeutic drug monitoring
- Know drug side effects and interaction and their management

CONTENT

1. Introduction to the course
- 2.
3. Infectious diseases
4. Gastrointestinal diseases
5. Cardiovascular diseasesPulmonary diseases

SOURCES

1. Applied Therapeutics; Kodo-Kilmbel, Last Edition
2. Pharmacotherapy: A Pathophysiological Approach, Last Edition, Dipiro
3. Comprehensive Pharmacy Review
4. Clinical Pharmacy, Last Edition

5. Harrison
6. Last guidelines for each disease

ASSESSMENT METHOD

1. Multiple choice and essay type exam (midterm and final exam) 80% Queue 20%

COURSE NAME: Pharmacotherapy II

NUMBER OF CREDITS: 3

COURSE TYPE: Theoretical

PREREQUISITES: Pharmacotherapy I

GENERAL AIMS

Familiarizing students with pharmacotherapy of the disease based on pathophysiological, pharmacokinetic and pharmacological principles

COURSE DEFINITION

One of the major roles of the pharmacist is to provide doctors with efficient guidance in the area of pharmacotherapy. Therefore in this course students are familiarized with diseases, symptoms, diagnostic methods and therapy.

LEARNING OUTCOMES

Students must:

- Know epidemiological properties of each disease
- Know the applications and interpretations of diagnostic tests
- Know pathophysiological properties of diseases
- Know the symptoms of diseases
- Know therapeutic measures for each disease
- Know similar or substitute therapies for each disease
- Know the importance of economy in pharmacotherapy
- Know evidence based pharmacotherapy
- Know Irritations and drug side effects

CONTENT

1. Endocrinologic diseases
2. kidney diseases
3. Neurologic diseases
4. Psychiatric diseases
5. Pediatric common diseases

RESOURCES

1. Applied Therapeutics; Kodo-Kilmbel, Last Edition
2. Pharmacotherapy: N Approach, A Pathophysiological Approach, Last Edition, Dipiro Hasted
3. Comprehensive Pharmacy Review
4. Clinical Pharmacy, Last Edition
5. Harrison
6. Cecil
7. Current Therapy; Conn's

ASSESSMENT METHOD

8. Multiple choice and essay type exam 80%
9. Seminar 20%

COURSE NAME: Therapeutics III
NUMBER OF CREDITS: 3
COURSE TYPE: Theoretical
PREREQUISITES: Pharmacology II

GENERAL AIMS

Familiarizing students with pharmacotherapy of the disease based on pathophysiological, pharmacokinetic and pharmacological principles

COURSE DESCRIPTION

One of the major roles of the pharmacist is to provide doctors with efficient guidance in the area of pharmacotherapy. Therefore in this course students are familiarized with diseases, symptoms, diagnostic methods and therapy.

LEARNING OUTCOMES

Students must:

- Know epidemiological properties of each disease
- Know the applications and interpretations of diagnostic tests
- Know pathophysiological properties of diseases
- Know the symptoms of diseases
- Know therapeutic measures for each disease
- Know similar or substitute therapies for each disease
- Know the importance of economy in pharmacotherapy
- Know evidence based pharmacotherapy
- Know Irritations and drug side effects

CONTENT

1. Rheumatologic diseases
2. Skin diseases
3. Hematology/oncology diseases
4. Special populationsGynecologic diseases

SOURCES

1. Applied Therapeutics; Kodo-Kilmbel, Last Edition
2. Pharmacotherapy: N Approach, A Pathophysiological Approach, Last Edition, Dipiro Hasted
3. Comprehensive Pharmacy Review
4. Clinical Pharmacy, Last Edition
5. Harrison
6. Cecil
7. Current Therapy; Conn's

ASSESSMENT METHOD

10. Multiple choice and essay type exam 80%

11. Seminar 20%

COURSE NAME: Pharmaceutical Policy & Pharmaco-economics

NUMBER OF CREDITS: 2

COURSE TYPE: Theoretical

PREREQUISITES: -

GENERAL AIMS

Familiarizing students with management and economics topics related to pharmacy administration.

COURSE DESCRIPTION

Due to the fact that providing pharmaceutical services in a pharmacy and other health care centers requires having knowledge of basic economic concepts and cost and benefit calculation, this course entails these topics in addition to accounting and Islamic economics.

LEARNING OUTCOMES

Students must:

1. Know principles of economics and economic systems.
2. Know health systems and pharmacy establishing processes.
3. Have knowledge of accounting, insurance and related issues.
4. Be able to form medical record folders and retrieve them

CONTENT

1. Principles of economics, definitions, supply and demand, economic balance, economic growth
2. Islamic economics: different economic mechanisms and comparisons, Islamic economics and characterizations, Islamic economic terms
3. Economics in health systems, economic growth in health systems, the effects of economic management on health indicators, cost analysis
4. Cost -effectiveness, cost-benefit
5. The importance of economics in pharmacy
6. Accounting
7. Investment management, cashier, goods, characterizations of a good manager
8. Risk management

SOURCES

1. Reminton's Pharmaceutical sciences
2. Pharmaceutical Management
3. Renington's Pharmaceutical sciences
4. Behavior Management; Zamani

ASSESSMENT METHOD

Essay type test and case discussion and Seminar

COURSE NAME: Medical Terminology

NUMBER OF CREDITS: 2

COURSE TYPE: Theoretical

PREREQUISITES: -

GENERAL AIMS

1. Familiarizing students with common words in medical sciences
2. Familiarizing students with common suffixes and prefixes

COURSE DESCRIPTION

Definitions of common words in medical sciences, suffixes and prefixes

LEARNING OUTCOMES

Students must:

1. Know pharmacy terminology
2. Know how to use suffixes and prefixes
3. Know phrases and words used in medical sciences

CONTENT

1. General principles of word formation
2. Abbreviations and their use in medicine and pharmacy
3. Adjectives and nouns pertaining to the body as a whole (prefixes, suffixes)
4. General principles of nomenclature of diseases and disorders and their diagnosis and surgical treatment

SOURCES

1. Suitable medical terminology books containing exercises
2. Remington; the sciences and practice of pharmacy, chapter one
3. English For Students of Pharmacy

ASSESSMENT METHOD

1. Team work 20%
2. Essay type and multiple choice test 80%

COURSE NAME: Nutraceuticals & Nutrition Care
NUMBER OF CREDITS: 2
COURSE TYPE: Theoretical
PREREQUISITES: Analytical Chemistry, Biochemistry

GENERAL AIMS

1. Familiarizing students with the role of therapeutic diets in diseases and the mutual interactions of drugs and foods and the results of these interactions
2. Familiarizing student with the effects of nutrition on health, and the diseases resulting from malnutrition

COURSE DESCRIPTION

Classifications of additives and their pharmaceutical effects, different types of therapeutic diets and the mutual interactions between food and drug (absorption and kinetics)

LEARNING OUTCOMES

1. Know different additives and their toxic effects
2. Know different therapeutic diets
3. Know the effects of malnutrition on drugs
4. Know the effects of foods and interactions with drugs

CONTENT

1. Food additives (vitamins, amino acids, minerals)
2. Diet therapy
 - a. Metabolic disorders
 - b. phenylketonuria
 - c. galactosmia
 - d. Maple syrup
3. Diet therapy in cardiovascular diseases(vessel blockage, hypertension)
4. Diet in diabetes
5. Diet in cancer, AIDS, injuries
6. Risk factors in food- drug interactions
7. The effects of food and nutrition on metabolism and distribution
8. The effects of protein-energy malnutrition on drugs
9. The effects of drinks on drugs
 - Milk, alcohol
10. Metabolic cycles and the effects of drugs on each cycle
11. Electrolytes and drug effects
12. Food antioxidants and their therapeutic effects

SOURCES

1. Basic Nutrition and Diet Therapy; Rabinson 1993
2. Remington's Pharmaceutical Sciences

3. Food Composition; A. Edwin, Martion. R 1987

ASSESSMENT METHOD

Essay type and multiple choice test 100%

COURSE NAME: Biopharmacy and Pharmacokinetics

NUMBER OF CREDITS: 3

COURSE TYPE: Theoretical

PREREQUISITES: Maths for pharmacist, Pharmacology III

GENERAL AIMS

Familiarizing students with dosage form destination in body and the factors influencing them (physicochemical properties, the effects of formulation changes and physiological properties (the effects of age, gender, disease, genetics, nutrition)).

COURSE DESCRIPTION

Because of the importance of drug destination in body, the study of absorption processes and the different pharmacokinetic models and parameters are covered in this course.

LEARNING OUTCOMES

Students must:

1. know membrane structure and transfer mechanisms
2. know the factors influencing transfer
3. know different pharmacokinetic models.
4. Know different pharmacokinetic parameters

CONTENT

1. Membrane structure and transfer mechanisms
2. Factors influencing transfer:
 - a. Physicochemical factors
 - b. Physiological factors
 - c. Factors influencing drug formulation
3. Pharmacokinetics
4. Determining pharmacokinetic parameters through intravenous injection
 - a. From urine sample
 - b. Renal clearance
 - c. Liver clearance
 - d. Metabolism
 - e. Nonlinear pharmacokinetics
 - f. TD.M

SOURCES

1. Applied Biopharmaceutics and Pharmacokinetics; Leon Shargel and Andrew
2. Biopharmaceutics and Clinical Pharmacokinetics; Mito- Gibaldi
3. Clinical Pharmaceutics; Rowland and Tozor

ASSESSMENT METHOD

1. Exercise 20%
2. Essay type test 70%
3. Seminar 10%

COURSE NAME: Biological Products

NUMBER OF CREDITS: 2

COURSE TYPE: Theoretical

PREREQUISITES: Immunology

GENERAL AIMS

- Familiarizing students with the definition of biological products
- Familiarizing students with the concepts of making biological products using old and new methods.
- Familiarizing students with different types of biological products, use and storage methods

COURSE DESCRIPTION

- Preparation and usage of biological products for active and passive immunization, monoclonal antibodies, interferons and blood products
- Knowledge about different allergy types, diagnosis and treatments and diagnostic products works based on allergic reactions

LEARNING OUTCOMES

Students must know:

1. Know the definition of biological products
2. Know the types and preparation of biological products
3. Biological products for active and passive immunization
4. Monoclonal antibodies and interferons
5. Blood products
6. Types, diagnosis and treatment of allergy
7. Diagnostic products works based on allergic reactions

CONTENT

1. Classifications and definitions of biologic products
2. Basic principles for preparation, storage, indication, cautions, contraindication and interaction of vaccines and serums
3. bacterial vaccines (types, preparation, storage, indication, cautions, contraindication and interaction) including:
 - a. Pertusis
 - b. Tuberculosis (BCG)
 - c. Typhoid
 - d. Cholera
 - e. Plague
 - f. Anthrax
4. Bacterial antigenic vaccines (types, preparation, storage, indication, cautions, contraindication and interaction) including:

- a. Meningococcal vaccine
 - b. Pneumococcal vaccine
 - c. Hib vaccine
5. Toxoids (types, preparation, storage, indication, cautions, contraindication and interaction) including:
 - a. Diphtheria toxoid
 - b. Tetanus toxoid
6. Viral vaccines (types, preparation, storage, indication, cautions, contraindication and interaction) including:
 - a. Small pox
 - b. Rabies
 - c. Yellow fever
 - d. Influenza
 - e. Polio
 - f. Measles
 - g. German measles
 - h. Mumps
 - i. Hepatitis A, B and C
 - j. Chicken pox
7. Adenovirus vaccines and DNA-based vaccines
8. Biologic products for passive immunization including antitoxins, antivenins, antisera and immunoglobulins (types, preparation, storage, indication, cautions, contraindication and interaction)
9. Monoclonal antibodies and interferons (types, preparation, storage, indication, cautions, contraindication and interaction)
10. Blood products
11. Types, diagnosis and treatment of allergy
12. Diagnostic products based on allergic reactions

SOURCES

1. Remington Biologics
2. Pharmacognosy and pharmacobiotechnology; Tyler

ASSESSMENT METHOD

1. Multiple choice test 40%
2. Essay type test 50%
3. Team based learning (TBL) 10%

COURSE NAME: Microbial Control

NUMBER OF CREDITS: 2

COURSE TYPE: Theoretical

PREREQUISITES: Medical Microbiology II and Pharmaceutics (Introduction)

GENERAL AIMS

Familiarizing students with drug microbial contamination, the hazards of using contaminated drugs, contamination prevention, and antimicrobial drug protection and evaluation methods.

COURSE DESCRIPTION

One of the most important points that should be considered when preparing and storing, quality assurance and preventing drug microbial contamination, and therefore methods to identify drug microbial contaminations and preventing them are taught in this course.

LEARNING OUTCOMES

Students must:

1. Know the application of microbiology in product microbial control and be able to use microorganisms in microbial control experiments.
2. Know the principles of product microbial assurance in factory and be able to do microbial assurance experiments in factory.
3. Know the principles of microbial control of sterilized unsterilized products and be able to perform the related experiments
4. Know the principles of antimicrobial protection.
5. Be able to identify rotten pharmaceutical products
6. Know the principles of potency determination of antibiotics, vitamins and amino acids using microorganisms.
7. Know evaluation principles of antimicrobial compounds and MIC and MBC determination

CONTENT

1. Microbiological quantifications and antibiotics and vitamins potency determination
2. Determination of MIC and MBC of antimicrobial compounds
3. Microbial control of products while being made
4. Antimicrobial protection systems
5. Product microbial contamination
6. Microbial control of unsterilized products

SOURCES

1. Microbial Quality Assurance; R.M Baird with S.F Bloomseld (1995-1996)
2. Guide to Microbiological Control in Pharmaceuticals; C. Denger
3. Pharmaceutical Microbiology W.B Huco, A.D Russel
4. Microbiological Quality Assurance, Dr. Kamal

5. Pharmaceutical Microbiology; Dr. Sadigheh Bazaz
6. Remington's Pharmaceutical sciences

ASSESSMENT METHOD

1. Essay type and multiple choice test 90%
2. Report and class participation 10

COURSE NAME: Microbial Control

NUMBER OF CREDITS: 1

COURSE TYPE: Practical

PREREQUISITE: Medical Microbiology II and Pharmaceutics (Introduction)

GENERAL AIMS

Familiarizing students with drug microbial contamination, the hazards of using contaminated drugs, contamination prevention, and antimicrobial drug protection and evaluation methods.

COURSE DESCRIPTION

Identifying microbial contaminations, and microbial control of pharmaceutical products will be practically thought in this course.

LEARNING OUTCOMES

1. Know the application of microbiology in product microbial control and be able to use microorganisms in microbial control experiments.
2. Know the principles of product microbial assurance in factory and be able to do microbial assurance experiments in factory.
3. Know the principles of microbial control of sterilized unsterilized products and be able to perform the related experiments
4. Know the principles of antimicrobial protection.
5. Be able to identify rotten pharmaceutical products
6. Know the principles of potency determination of antibiotics, vitamins and amino acids using microorganisms.
7. Know evaluation principles of antimicrobial compounds and MIC and MBC determination

CONTENT

1. Lyophilized ampoule opening test and microorganism culture
2. Protective agent effectiveness test
3. Total viable count (TVC)
4. Sterility testing
5. Antibiotic potency test using Method
6. Antibiotic potency test using Turbidimetric method
7. Minimum inhibitory concentration test (MIC)
8. Minimum bactericidal concentration test (MBC)
9. LAL test

SOURCES

1. Microbial Quality Assurance; R.M Baird with S.F Bloomseld (1995-1996)
2. Guide to Microbiological Control in Pharmaceuticals; C. Denger
3. Pharmaceutical Microbiology W.B Huco, A.D Russel

4. Microbiological Quality Assurance, Dr. Kamal
5. Pharmaceutical Microbiology; Dr. Sadigheh Bazaz
6. Remington's Pharmaceutical sciences

ASSESSMENT METHOD

1. Lab work result 80%
2. End-of-term examination 20%

COURSE NAME: Physicochemical Control

NUMBER OF CREDITS: 2

COURSE TYPE: Theoretical

PREREQUISITES: General Chemistry, Analytical Chemistry, Instrumental Analytical Methods

GENERAL AIMS

Familiarizing students with drug quality, the physicochemical quality of raw materials and pharmaceutical products, principles of analysis protocols and quantification of raw materials and pharmaceutical products

COURSE DESCRIPTION

Because of the indispensable role of the pharmacist in pharmaceutical industries, it is important to learn control and analysis methods, and therefore in this course students experiment sampling, analyzing different chemicals and determining the physicochemical stability of compounds.

LEARNING OUTCOMES

1. Know analysis protocols and drug and raw material quantification
2. Be able to design analysis protocols if needed
3. Know sampling methods and sample preparation
4. Know the simple classic and instrumental analysis methods
5. Be able to interpret the data

CONTENT

1. Principles of pharmaceutical physicochemical quality, standards and pharmacopeia
2. Pharmaceutical physicochemical quality, chemical properties, identity, quality or power and related tests
3. Principles of sampling, statistical methods of sampling from pharmaceutical products, sample preparation, extraction and purification methods
4. Analysis method evaluation
5. Classic drug analysis methods
6. Pharmaceutical tests related to drug formations (like solubility time and speed of tablets)
7. Chemical stability of drugs and protocols of stability tests for raw materials and pharmaceutical products
8. Application of chemical methods in quantification of pharmaceuticals
9. Validation and quality assurance

SOURCES

1. Pharmaceutical Analysis; Watson
2. Text Book of Pharmaceutical Analysis; Connor
3. USP and BP
4. Chemical Stability, a Hand Book for the Pharmacist

ASSESSMENT METHOD

1. Team work and work report 20
2. Essay type or multiple choice test: 80%

COURSE NAME: Physicochemical Control

NUMBER OF CREDITS: 1

COURSE TYPE: Practical

PREREQUISITE: General Chemistry, Analytical Chemistry, Instrumental Analytical Methods

GENERAL AIMS

Familiarizing students with different methods of pharmaceutical physicochemical tests to quantify active ingredients and compound stability tests.

COURSE DESCRIPTION

Performing physicochemical tests on pharmaceutical and non-pharmaceutical compounds and different drugs in the market and quantification of materials in different pharmaceutical products using analysis devices are of the main topics taught in this course.

LEARNING OUTCOMES

Students must:

1. Know different methods to quantify the active ingredients using standard methods
2. Know methods to separate the active ingredients from other ingredients
3. Know how to quantify active ingredients in different dosage forms

CONTENT

1. Experiment1: Identification, potency and purity test on aspirin
2. Experiment2: Identification, potency and purity test on salicylic acid
3. Experiment3: Identification, potency and purity test on ascorbic acid
4. Experiment4: Identification and quantification tests on indomethacine capsule
5. Experiment5: Physicochemical control test on dextrose saline
6. Experiment6: physicochemical control of dextrose saline
7. Experiment7: separation and identification of Aspirin- Codeine Phosphate tablet ingredients
8. Experiment8: quantification of Estradiol valerate in intravenous solution through UV
9. Experiment9: quantification of hydrochloride Pilocarpine in eye drop
10. Experiment10: Quantification of Metocarbamol in injectable solution through IR
11. Experiment11: Analysis method validation, (Diclofenac quantification through UV)
12. Experiment 12: dosage units and uniformity tests on Fenobarbital 100 and 150 tablets

SOURCES

1. Pharmaceutical Analysis; Watson
2. Text Book of Pharmaceutical Analysis; Connor
3. USP and BP
4. Chemical Stability, a Hand Book for the Pharmacist

ASSESSMENT METHOD

1. Presenting experiment results and related calculations 80%
2. Work report 20%

COURSE NAME: Biostatistics

NUMBER OF CREDITS: 2

COURSE TYPE: Theoretical

PREREQUISITES: -

GENERAL AIMS

Familiarizing students with concepts and applications of statistics in different areas of medical sciences, particularly research.

COURSE DESCRIPTION

Statistics quantify the quality of communities, help understand situations better and facilitate scientific analyses. Quantifying the value and validity of research projects and decision making is not possible without the science of statistics.

CONTENT

1. Definition of statistics
2. Distribution and definition
3. Probability
4. Time distribution
5. Estimation
6. Variance analysis
7. Health indicators
8. Epidemiological studies and analyses
9. Applications of statistics in medical sciences
10. Optimization

SOURCES

1. Statistical Methods and Health Indicators; Dr. Kazem Mohammad, Dr. Malek Afzali
2. Pharmaceutical Statistics, Bultun
3. Pharmaceutical Experimental Design; Luis

ASSESSMENT METHOD

Work report and essay type test 100%

COURSE NAME: Biostatistics

NUMBER OF CREDITS: 1

COURSE TYPE: Practical

PREREQUISITES: -

GENERAL AIMS

Familiarizing student with statistical software such as SPSS to do statistical analyses in medical research

COURSE DESCRIPTION

Experimental sciences with mathematical foundations can be evaluated. Besides knowledge of statistics, the student must be able to choose the suitable statistical software in different research topics and know how to use the software.

CONTENT

1. Introduction of common statistical software
2. Statistical test choice
3. working with the data
4. questionnaire data
5. graphs and charts
6. data coding
7. dependent and independent mean comparison
8. variance analysis

SOURCES

Handbook of SPSS; Dr. Akbar Fotouhi

ASSESSMENT METHOD

Statistics project including analysis 100%

COURSE NAME: Instrumental Analytical methods

NUMBER OF CREDITS: 3

COURSE TYPE: Theoretical

PREREQUISITES: Analytical Chemistry, Organic Chemistry

GENERAL AIMS

1. Familiarizing student with the laws and principles of instrumental quantification
2. Gaining proficiency in identification and quantification of pharmaceuticals
3. Preparation for the courses of quality control and physicochemical quality assurance of pharmaceuticals
4. Preparation for research theses in different areas of pharmaceutical sciences

COURSE DESCRIPTION

Drug analysis and quantification of materials in pharmaceutical product are not possible without high technology analysis devices, therefore learning the theories based on which these devices work is of the topics covered in this course.

LEARNING OUTCOMES

1. Know the principles and applications of each instrumental method
2. Know the principles of identification and quantification of chemical and pharmaceutical compounds using the devices.

CONTENT

1. Introduction and method classification
2. Principles of spectroscopy
3. molecular spectroscopy (UV, florescence, IR, ...)
4. Atomic spectroscopy
5. Electrochemical methods
6. Separation and chromatographic methods
7. NMR spectroscopy
8. Mass spectroscopy

SOURCES

1. Chromatography and Spectroscopy; Dr. Abbas Shafei
2. Review on Spectroscopy;
3. Fundamentals of Analytical Chemistry; Skoog-West
4. Introduction to chemical Analysis; Mc Graw 1993

ASSESSMENT METHOD

1. Essay type test 10%
2. Multiple choice test 80%
3. Seminar 10%

COURSE NAME: Instrumental Analytical Methods

NUMBER OF CREDITS: 1

COURSE TYPE: Practical

PREREQUISITE: Analytical Chemistry and Organic Chemistry

GENERAL AIMS

Familiarizing students with identification, purification and chemical structure identifiers

COURSE DESCRIPTION

Using analysis devices to separate and identify different compounds, and choosing and correct use of the devices

LEARNING OUTCOMES

Students must:

1. Extraction methods and equipment
2. Know principles of using different analysis devices
3. Know how to prepare chemicals to work with the equipment

CONTENT

1. Spectroscopy, UV
2. Spectroscopy, IR
3. NMR
4. Florometry
5. Polarimetry
6. GC, GC MS
7. HPLC

SOURCES

1. Chromatography and Spectroscopy; Dr. Abbas Shafei
2. Review on Spectroscopy;
3. Fundamentals of Analytical Chemistry; Skoog-West
4. Introduction to chemical Analysis; Mc Graw 1993

ASSESSMENT METHOD

1. Work result and interpretations 80%
2. Work report 20%

COURSE NAME: Pharmaceutical Biotechnology

NUMBER OF CREDITS: 3

COURSE TYPE: Theoretical

PREREQUISITE: General Biology

GENERAL AIMS

1. Familiarizing student with the principles of drug production using biotechnological techniques
2. Familiarizing students with use of microbial sources in pharmaceutical compound production

COURSE DEFINITION

Due to the progress of biotechnology in pharmaceutical sciences and the emergence of novel drugs made using new complicated technologies, it seems inevitable for pharmacy students to build a foundation about uses and processes of these products with this course.

LEARNING OUTCOMES

Students must:

1. Know how to use microbes to produce pharmaceutical compounds
2. Know production methods and sources of biotechnological pharmaceutical products
3. Know the equipment used in biotechnological pharmacy

CONTENT

1. Definition, history and applications of biotechnology in medical sciences
2. Biotechnological equipment
3. Microorganism culture, growth graph
4. Different culture methods
5. Biological products and production processes
 - Antibiotics, enzymes, novel products, organic acids, anti-cancers
6. Purification methods
7. Production of industrial microorganisms and an intro to microbial collections
8. Biotransformation

SOURCES

1. Microbial Biotechnology; Dr. Fereydoun Malek Zadeh; Tehran University Publications
2. Industrial Biotechnology; Dr. Shoja Sadat

ASSESSMENT METHOD

Essay type and multiple choice test 100%

COURSE NAME: Community Pharmacy Training I

NUMBER OF CREDITS: 2

COURSE TYPE: Practice Experience

PREREQUISITES: -

GENERAL AIMS

- Familiarizing students with OTC and Prescription drugs
- Familiarizing student with common dosage forms in Iran pharmaceutical market
- Familiarizing with prescription reading, dispensing and the related laws (including health insurance laws)
- Developing effective relations with patients and medical staff and providing them with pharmaceutical guidance.

COURSE DESCRIPTION

One of the most significant factors in the field of pharmacy and an important responsibility of the pharmacist is providing guidance in pharmacotherapy; therefore acquiring knowledge of diseases and disease physiopathology is of high priority. In this course different diseases, symptoms and diagnostic methods are covered.

LEARNING OUTCOMES

Students must:

- Know different common dosage forms and storing methods in pharmaceutical pharmacies and storage rooms
- Know the required scientific references in a pharmacy and know how to use them
- Know prescription reading and dispensing
- Know how to interact with patients and medical staff
- Know correct methods of pricing, buying a franchise

CONTENT

(Each session is equivalent to 6 hours)

- Different dosage forms (3 sessions)
- Shelving drugs and dosage forms (1 session)
- Drugs that must be stored in refrigerator and their special storing approaches (1 session)
- Prescriptions and the information they reveal (1 session)
- Insurance laws (1 session)
- Prescription pricing rules(1 session)
- References in pharmacy (1 session)
- Dispensing and practice experience, interaction with patients and the staff (12 sessions)

SOURCES

- AHSF, last edition
- Martin Dale, last edition

- Facts and Comparison, last edition
- USPDI (for patients and health care providers) last edition
- Pharmaceutical Calculations; JI Zats, last edition
- Pharmaceutical Rules and Regulations in Iran, last edition

ASSESSMENT METHOD

1. Written evaluation 40%
2. Practical evaluation (student participation) 20%
3. Oral evaluation 40%

COURSE NAME: Industrial Training

NUMBER OF CREDITS: 2

COURSE TYPE: Practice Experience

PREREQUISITES: Pharmaceutics (Semi-Solids & Inhalers)

GENERAL AIMS

Learning the production processes and the qualitative and quantitative tests in drug mass production, LP, GMP

COURSE DESCRIPTION

One of the main activities of pharmacists is working as technicians in pharmaceutical companies, and therefore in this course students are familiarized with pharmaceutical company work and the different parts of factories.

LEARNING OUTCOMES

Students must:

1. Know ingredients storing methods and conditions
2. Know packaging units
3. Know formulation design and mass production of pharmaceutical products

CONTENT

- General knowledge of pharmaceutical companies and the responsibilities (meetings with company authorities and work report)
- Visiting different storage rooms (ingredient storage and packaged drugs storage, quarantine, spare parts... and work report)
- Different packaging units (liquids, injectable and non-injectable, semi-solids and solids ... and work report)
- Production processes of different dosage forms
- Qualitative control processes including physicochemical, microbiological and biological control
- Research on formulation design and improvement of the existing formulations

SOURCES

F.D.A, W.H.O and ICI guidelines

ASSESSMENT METHOD

Work report and interpretation 100%

COURSE NAME: Community Pharmacy Internship

NUMBER OF CREDITS: 6

COURSE TYPE: Advanced Practice Experience

PREREQUISITES: Community Pharmacy Training II, Pharmacotherapy III

GENERAL AIMS

- Acquiring proficiency to work as therapy consultants to patients and medical staff
- Acquiring knowledge of OTC drugs and prescribing them
- Acquiring knowledge of derivative drug formation
- Learning order placement and purchasing goods from companies
- Relations between pharmacies and insurance companies

COURSE DESCRIPTION

Using the materials learned in pharmacy internship and other issues like placement of orders and drug purchase

LEARNING OUTCOMES

Students must:

1. Be able to interact with patients
2. Be able to evaluate prescriptions, regarding adverse effects, toxic reactions and how to take the medication
3. Know how to use all dosage forms (ointments, drops, eye and nose creams, suppositories, tablets and rectal and vaginal creams)
4. Know how to report side effects of a drug
5. Know how to order and purchase from distributing companies
6. Be able to use computer software to make insurance lists
7. Be able to transfer information and advice to patients
8. Be able to compound drugs

CONTENT

(Each session is equivalent to 6 hours)

- Placement of orders to distributing companies (1 session)
- Software required for pharmacy work (1 session)
- Prescription evaluation principles (1 session)
- OTC drugs (1 session)
- Common compounded drugs (1 session)
- How to use different dosage forms (1 session)
- ADR and report (1 session)
- Advanced Practice Experience (306 hours)

SOURCES

- AHSF, last edition
- Martin Dale, last edition

- Facts and Comparison, last edition
- USPDI (for patients and health care providers) last edition
- Pharmaceutical Calculations; JI Zats, last edition
- Pharmaceutical Rules and Regulations in Iran, last edition

ASSESSMENT METHOD

1. Written exam 30%
2. Practical evaluation (presence in sessions) 20%
3. Proficiency exam 50%

COURSE NAME: Clinical Internship

NUMBER OF CREDITS: 6

COURSE TYPE: Advanced Practice Experience

PREREQUISITES: Community Pharmacy Training II, Pharmacotherapy III

GENERAL AIMS

- Familiarizing students with clinical and lab manifestations of common diseases
- Familiarizing students with disease pharmacotherapy and monitoring principles
- Teaching the methods to record the required information related to pharmaceutical services

COURSE DESCRIPTION

Because of the important role of the pharmacist in the health cycle, it is necessary for a pharmaceutical scientist to be able to interact with patients and guide doctors.

LEARNING OUTCOMES

Students must:

- Know clinical symptoms of diseases
- Know pharmacotherapy for common diseases
- Know how to provide patients and doctors with pharmaceutical advice
- Know how to monitor and prevent adverse effects
- Know the principles of prescribing P-drug and how to monitor responses to treatment

CONTENT

- An introduction to Clinical Pharmacy (1 session)
- Familiarization to hospital and different wards (1 session)
- Presence in hospital in five of the following wards based on student choice or availabilities
 - a. Internal: Nephrology
 - b. Lung
 - c. Heart
 - d. Glands
 - e. Blood, Oncology
 - f. Rheumatology
 - g. Digestion
 - h. Neurology, Psychology
 - i. Infection
 - j. ICU or CCU
 - k. Skin
 - l. Gynecology (female students)
 - m. General surgery
 - n. Pediatrics
- Offering consultation to released patients (2 weeks)
- Presence in sterile room and preparing injectable solutions (2 weeks)

SOURCES

1. Interpretational laboratory data
2. Applied Therapeutics, Last Edition
3. Pharmacotherapy, Dippiro, Last Edition
4. Internal Medicine, Ceecil, Last Edition
5. Internal Medicine Harrison, Last Edition
6. AHFS

ASSESSMENT METHOD

1. Written exam 35%
2. Practical evaluation 30%
3. Oral evaluation 35%

COURSE NAME: Industrial Internship
NUMBER OF CREDITS: 6
COURSE TYPE: Advanced Practice Experience
PREREQUISITES: Industrial Training

GENERAL AIMS

Complementary studies, GMP, GIP, System Validation

COURSE DESCRIPTION

Build and understanding of all the processes in a pharmaceutical manufacturing company including ingredient purchase, storing these ingredients till the last stage of production and selling the products.

LEARNING OUTCOMES

- Student must be able to comment on product storage
- Students must know test methods, production processes and validation approaches

CONTENT

1. Meeting and consulting heads of different factory units
- 2-5. Complementary study of different storage rooms and preparing report
- 6-9. Visiting the packaging unit and preparing report
- 15-20. Visiting production units and preparing report
- 21-30. visiting quality control units
- 31-34. visiting research units including synthetic and plant-based drugs and cosmetics
- 35-37. visiting the technical units of the factory, machines and devices maintenance, ventilation systems...
- 38-40. visiting administrative units and preparing report

SOURCES

Rules of F.D.A and W.H.O

ASSESSMENT METHOD

Analytical work report on the different production processes

COURSE NAME: Radiopharmaceuticals

NUMBER OF CREDITS: 2

COURSE TYPE: Theoretical

PREREQUISITES: -

GENERAL AIMS

Familiarizing students with:

1. Principles and fundamentals of isotope use in researches done in different pharmaceutical and medical areas
2. Principles of isotope use in disease diagnosis

LEARNING OUTCOMES

Students must:

1. Know isotope characteristics
2. Know the principles of isotope use in research and therapy
3. Know the devices used to identify and quantify isotopes
4. B able to compare the use of isotopes in diagnosis and therapy with other methods

CONTENT

1. Fundamentals of Radio Physics (atom structure, forces affecting atom structure, nuclides, atom stability, radioactivity)
2. Radioactive processes (alpha, beta, gamma decay, radioactive balance, stable balance, half- life)
3. Nuclear reactors, radio chemistry, radioactive waste and waste management, radio isotope enrichment and radio chemical purification, ...)
4. Introduction to nuclear medicine and use of pharmaceuticals
5. Fundamentals of radiation protection

SOURCES

1. Textbook of Radiopharmacy, Theory and practice; 3rd edition, C.B Sampson (alst edition)
2. Fundamentals of Nuclear Pharmacy C.B Sana (last edition)
3. The Handbook of Radio Pharmaceuticals; A. Owanwanne, M. Patel, S. Sadek (last edition)

ASSESSMENT METHOD

1. Essay Type Test 75%
2. Multiple choice test 155
3. Seminar 10%

COURSE NAME: Cell Culture

NUMBER OF CREDITS: 1

COURSE TYPE: Theoretical

PREREQUISITES: -

GENERAL AIMS

1. Familiarizing students with cell and culture techniques
2. Familiarizing students with the methods to use cultured cells and their application in pharmaceutical sciences

COURSE DESCRIPTION

Today much pharmaceutical research happens at cellular levels and drug effects are examined at cellular levels and therefore this course covers types of cell and cell life cycle.

LEARNING OUTCOMES

Students must:

1. Know different types of cells and the factors influencing their culture and growth
2. Know animal cellular structure
3. Know the applications of cultured cells in pharmaceutical sciences.

CONTENT

1. History of cell culture and applications
2. Factors influencing cell culture
3. Cell individual life cycle
4. Animal cell structure
5. Biological needs and the vital processes of animal cells
6. Sterilization methods and cell culture lab equipment
7. Cell culture media and contents
8. Short-long term animal cell storing animal cell biochemical quantification
9. Applications of cell culture in pharmaceutical and pharmacological research

SOURCES

1. Animal cell culture, R.I. Fresheng, 1992, Oxford University Press
2. Large Scale Cell Culture, B.K, Lydersen; Hanser Publishers
3. Epithelial Cell Culture, A.J. Shaw, Oxford University Press

ASSESSMENT METHOD

Essay type and multiple choice test 100%

COURSE NAME: Plant Cell Culture
NUMBER OF CREDITS: 2
COURSE TYPE: Theoretical
PREREQUISITES: Pharmacognosy II

GENERAL AIMS

Familiarizing student with the principles of plant cell culture and production of secondary metabolites

LEARNING OUTCOMES

Students must:

- Know plant cell culture principles
- Know all culture media
- Know effective factors in cell culture
- Know uses of biochemical changes
- Know the factors effective on production of secondary metabolites

CONTENT

- Plant Biotechnology
- Intro and history
- Plant cell culture types
- Plant cell culture use
- Plant cell culture lab
- Methods used in plant cell culture lab
- Compounds used in cell culture media
- Effective factors
- Obstacles and limitations
- Metabolite production increase
- Elicitors and secondary metabolite production

SOURCES

- Fundamentals of plant tissue culture; Dr. Soleyman Afsharipoor, Isfahan University of Medical Sciences Publication, 1372
- Pharmacognosy, Trace ; Saunder Publications' 1996

ASSESSMENT METHOD

Multiple choice test 100%

COURSE NAME: Traditional and Alternative Medicine

NUMBER OF CREDITS: 2

COURSE TYPE: Theoretical

PREREQUISITES: -

GENERAL AIMS

- Familiarizing student with the fundamentals of traditional and complementary medicine
- Familiarizing students with different types of complementary medicine
- Familiarizing students with preparation of different drugs in traditional and complementary medicine

LEARNING OUTCOMES

Students must:

1. Know the fundamentals of traditional and complementary medicine
2. Know Iranian traditional medicine practitioners
3. Know different types of complementary medicine

CONTENT

1. Fundamentals of traditional and complementary medicine
2. History of traditional medicine
3. Greek medicine
4. Medicinal plants
5. Complementary medicine
6. Traditional pharmacy
7. Preparation of different drugs in traditional and complementary medicine

SOURCES

1. History of Medicine in Iran; volume 1,2
2. Encyclopedia of Natural Healing, Woodham and Peter
3. A Textbook of Natural Medicine, Pizzorno and Murray

ASSESSMENT METHOD

1. Essay type and multiple choice test 80%
2. Seminar 20%
